When servicing trucks and vans with extremely long wheelbases, longer-reach arms deliver a more stable lifting solution. The lengthy triple-telescoping arms on BendPak’s new ALI Certified XPR-12CL-LTA extend to 72” long – that’s six feet in length and over one foot longer than almost any other lift or brand in its class. And with rugged BendPak dependability combined with a 16-piece adapter set, you’ll realize that balancing safety* and worker productivity has never been so perfectly matched. For more information visit www.bendpak.com/LTA or call 1-800-253-2363.

The 100% cast iron V-Max Elite pump features splash lubrication for total reliability and a V-4 finned cylinder configuration that provides 360° cooling. Heavy-duty disc-type valves are dependable and accessible without having to remove the cylinder head or perform other complicated valve maintenance procedures. Due to a slower RPM speed and two-stage design, the large V-Max pump puts out a lot of air with little noise. A built-in intercooler and air-cooled aftercooler chill the air, resulting in reduced heat and less moisture from condensation.

Ranger’s RV1 Wheel Guardian is the revolutionary touchless tire changer of the future. This tire machine breaks beads and swaps tires faster than virtually any other design on the market. Eliminate the manual hassle of changing tires when you go touchless!
Tire Changers

Ranger’s NextGen™ Tire Changers - Tire Shop Tested™

All NextGen models are loaded with design enhancements that make the technician’s job easier. Sturdy frames and hardened-steel horizontal outrigger support arms eliminate flex during all tire service procedures, reducing the chance of damage to expensive wheels. Bead seating and tire inflation is simple and effortless with Ranger’s exclusive TurboBlast™ portable bead seating system. High-torque electric turntables, increased speed and reversible direction mean quicker tire removal and installation. Industrial-grade pneumatic control valves feature die cast and machined bodies constructed from zinc and aluminum for increased service life and performance at the highest level possible within almost every imaginable working condition. Important accessories come standard, like a multi-piece plastic wheel protector kit that includes turntable jaw covers, bead-breaker blade boots and specialized mount / demount head covers to help protect delicate wheels.

INFORMATION:
The Ranger LS43B wheel balancer handles wheels up to 43 inches in diameter. The average cycle time is just 7 seconds, making it one of the fastest and most reliable balancing machines ever built. The standout feature on this model, of course, is Ranger’s exclusive 3D Quick-Touch™ Laser-Spot™ technology that highlights the pinpoint location at which operators should place the minimal amount of weight in order to achieve a perfect balance at the 6 o’clock position. Only a single weight placement should be necessary for most wheel and tire configurations.

LS43B FEATURES:
- Dynamic, Static and Performance Alloy settings
- Low RPM balancing speed and rapid six-second cycle time
- Manual or automatic start when hood is lowered
- Self-calibration function
- Automatic braking

BendPak recognizes the manufacturing process as our moment of maximum influence. When we ship a piece of equipment, we need to know that the product that left our manufacturing complex was the best it could be. That’s why we demand nothing short of the very finest in facilities and machinery. Our primary factory houses development and manufacturing for medium and heavy-duty lifting products and wheel service models. At just over 300,000 square ft., it’s designed for maximum efficiency and safety. Plus, we consistently employ the best steel fabrication techniques in the world.

Main Production Facility

BendPak’s second mega-sized manufacturing is used primarily for manufacturing light and medium-duty lift products, select parking systems and select vehicle repair tools and equipment. The multiplex factory houses state-of-the-art equipment including, numerically-controlled turning and milling equipment and automated welding systems, as well as full-capability services like comprehensive metallurgy testing, heat treatment, automated powder coating and other specialty operations. The facility also houses assembly and packaging operation centers and product development testing labs for BendPak’s growing customer base around the globe.
Our multi-department manufacturing complexes have allowed us to expand machinery and employees and triple our daily production capacity. All BendPak employees are Q.C. trained and follow rigid ISO-9001 guidelines. Every day, more than 700 employees around the world dedicate themselves to putting our core values into action. Safety is first—it’s our company’s top priority, followed closely by environmental responsibility, cost-efficiency, quality, customer service and accountability for all departments. These principles guide our highly skilled workforce toward BendPak’s unified vision.

Across the globe, BendPak’s facilities encompass over 600,000 sq. ft. in total and consist of vertically integrated manufacturing, operations and logistics facilities. Each location follows strict guidelines as outlined by ISO-9000, further supporting our position as a premier global manufacturer. At BendPak, we ensure that our offshore manufacturing is no different in approach, standards, quality, inspection or packaging from our domestic production. These facilities are audited year-round and undergo systematic evaluation of documented quality programs such as TUV, ANSI/ALI ALCTV, CSA, UL and AS/NZS 1418.9. The programs themselves are audited quarterly, regardless of the facility location, to ensure continued compliance with all applicable standards.
