RECEIVING
The shipment should be thoroughly inspected as soon as it is received. The signed Bill of Lading is acknowledgement by the shipping carrier as receipt of this product as listed in your invoice as being in a good condition of shipment. If any of these goods are missing or damaged, do not accept goods until the shipping carrier makes a notation of the missing or damaged goods. Do this for your protection.

BE SAFE
Your new lift was designed and built with safety in mind. However, your overall safety can be increased by proper training and thoughtful operation. DO NOT operate or repair this equipment without reading this manual and the important safety instructions shown inside. Keep this manual near the lift at all times. Make sure that ALL USERS read and understand this manual prior to use.
6,000 POUND CAPACITY DOUBLE STACKER TILT PARKING LIFTS

This instruction manual has been prepared specifically for you. Your new lift is the product of over 40 years of continuing research, testing and development; it is the most technically advanced lift on the market today.

READ THIS ENTIRE MANUAL BEFORE INSTALLATION & OPERATION BEGINS

RECORD HERE THE LIFT AND POWER UNIT INFORMATION WHICH IS LOCATED ON THE SERIAL NUMBER DATA PLATES ON THE LIFT AND ON THE POWER UNIT

Power Unit Model #  _____________
Power Unit Date Of Mfg. _____________
Power Unit Serial #  _____________

This information is required when calling for parts or warranty issues.

PRODUCT WARRANTY

Our comprehensive product warranty means more than a commitment to you; it’s also a commitment to the value of your new BendPak lift. For full warranty details and to register your new lift contact your nearest BendPak dealer or visit:

http://www.bendpak.com/support/warranty/

NOTE:

Every effort has been taken to ensure complete and accurate instructions have been included in this manual, however, possible product updates, revisions and or changes may have occurred since this printing. BendPak Ranger reserves the right to change specifications without incurring any obligation for equipment previously or subsequently sold. Not responsible for typographical errors.

IMPORTANT NOTICE

Do not attempt to install this lift if you have never been trained on basic automotive lift installation procedures. Never attempt to lift components without proper lifting tools such as a forklift or cranes. Stay clear of any moving parts that can fall and cause injury. These instructions must be followed to ensure proper installation and operation of your lift. Failure to comply with these instructions can result in serious bodily harm and void product warranty. Manufacturer will assume no liability for loss or damage of any kind, expressed or implied, resulting from improper installation or use of this product.

PLEASE READ ENTIRE MANUAL PRIOR TO INSTALLATION.

OWNER’S RESPONSIBILITY

To maintain the lift and user safety, the responsibility of the owner is to read and follow these instructions:

♦ Follow all installation and operation instructions.
♦ Make sure installation conforms to all applicable local, state, and federal codes, rules, and regulations; such as State and Federal OSHA regulations and electrical codes.
♦ Carefully check the lift for correct initial function.
♦ Read and follow the safety instructions. Keep them readily available for machine operators.
♦ Make certain all operators are properly trained, know how to safely and correctly operate the unit, and are properly supervised.
♦ Allow unit operation only with all parts in place and operating safely.
♦ Carefully inspect the unit on a regular basis and perform all maintenance as required.
♦ Service and maintain the unit only with authorized or approved replacement parts.
♦ Keep all instructions permanently with the unit and all decals on the unit clean and visible.

DEFINITIONS OF HAZARD LEVELS

Identify the hazard levels used in this manual with the following definitions and signal words:

⚠️ DANGER

Watch for this symbol as it means: Immediate hazards which will result in severe personal injury or death.

⚠️ WARNING

Watch for this symbol as it means: Hazards or unsafe practices which could result in severe personal injury or death.

⚠️ CAUTION

Watch for this symbol as it means: Hazards or unsafe practices which may result in minor personal injury, product or property damage.

BEFORE YOU BEGIN

NOTIFY THE CARRIER AT ONCE if any hidden loss or damage is discovered after receipt and request the carrier to make an inspection. If the carrier will not do so, prepare a signed statement to the effect that you have notified the carrier (on a specific date) and that the carrier has failed to comply with your request.

IT IS DIFFICULT TO COLLECT FOR LOSS OR DAMAGE AFTER YOU HAVE GIVEN THE CARRIER A CLEAR RECEIPT. Support claim with copies of the bill of lading, freight bill, invoice, and photographs, if available. BendPak’s willingness to assist in helping you process your claim does not make BendPak responsible for collection of claims or replacement of lost or damaged materials.
LIFT HEIGHT CLEARANCE NOTE: There must be a 1" MIN distance from the top of the loaded vehicle to the nearest obstruction when the lift is in a raised position.
INSTALLER / OPERATOR PLEASE READ AND FULLY UNDERSTAND. BY PROCEEDING, YOU AGREE TO THE FOLLOWING:

♦ I have visually inspected the site where the lift is to be installed and verified the concrete to be in good condition, free of cracks or other defects. I understand that installing a lift on cracked or defective concrete could cause lift failure resulting in personal injury or death.

♦ I understand that a level floor is required for proper installation and level lifting.

♦ I understand that I am responsible if my floor is of questionable slope, and that I will be responsible for all charges related to pouring a new level concrete slab if required.

♦ I understand that BendPak lifts are supplied with concrete fasteners meeting the criteria of the American National Standard “Automotive Lifts - Safety Requirements for Construction, Testing, and Validation” ANSI/ALI ALCTV-2006, and that I will be responsible for all charges related to any special, regional, structural, and/or seismic anchoring requirements specified by any other agencies and/or codes such as the Uniform Building Code (UBC) and/or International Building Code (IBC).

♦ I will assume full responsibility for the concrete floor and condition thereof, now or later, where the above equipment model is to be installed. Failure to follow Danger, Warning, and Caution instructions may lead to serious personal injury or death to operator or bystander or damage to property.

♦ I understand that BendPak lifts are designed for indoor and outdoor use. Contact factory for outdoor use requirements. Failure to follow installation instructions may lead to serious personal injury, death to operator or bystander, or damage to property or lift.

⚠️ DANGER ⚠️

Failure to follow Danger, Warning, and Caution instructions may lead to serious personal injury, death to operator or bystander or damage to property or lift.

⚠️ WARNING ⚠️

Please read the entire manual prior to installation. Do not operate this machine until you have read and have understood all of the Danger, Warning and Caution alerts in this manual. For additional copies or further information, contact:

BendPak Inc.
1645 Lemonwood Dr.
Santa Paula, CA. 93060
1-805-933-9970
www.bendpak.com

INSTALLER / OPERATOR PROTECTIVE EQUIPMENT

Personal protective equipment helps makes installation and operation safer; however, it does not take the place of safe operating practices. Always wear durable work clothing during any installation and/or service activity. Shop aprons or shop coats may also be worn; however, loose-fitting clothing should be avoided.

Tight-fitting leather gloves are recommended to protect the technician’s hands when handling parts. Sturdy leather steel-toe work shoes and oil resistant soles should be used by all service personnel to help prevent injury during typical installation and operation activities.

Eye protection is essential during installation and operation activities. Safety glasses with side shields, goggles, or face shields are acceptable. Everyday eyeglasses only have impact resistant lenses, they are not safety glasses. Back belts provide support during lifting activities and are also helpful in providing worker protection. Consideration should also be given to the use of hearing protection if service activity is performed in an enclosed area or if noise levels are high.

⚠️ CAUTION ⚠️

The safe operating temperature range for this product is 41° F - 104° F

THIS SYMBOL POINTS OUT IMPORTANT SAFETY INSTRUCTIONS WHICH IF NOT FOLLOWED COULD ENDANGER THE PERSONAL SAFETY AND/OR PROPERTY OR YOURSELF AND OTHERS AND CAN CAUSE PERSONAL INJURY OR DEATH. READ AND FOLLOW ALL INSTRUCTIONS IN THIS MANUAL BEFORE ATTEMPTING TO OPERATE THIS MACHINE.
INTRODUCTION

1. Carefully remove the crating and packing materials. CAUTION! Be careful when cutting steel banding material as items may become loose and fall, causing personal harm or injury.

2. Check the voltage, phase, and proper amperage requirements for the motor shown on the motor plate. Electrical work should be performed only by a certified electrician.

IMPORTANT SAFETY INSTRUCTIONS

Read these safety instructions entirely. Do not attempt to install this lift if you have never been trained on basic automotive lift installation procedures. Never attempt to lift components without proper lifting tools such as forklift or cranes. Stay clear of any moving parts that may fall and cause injury. When using your garage equipment, basic safety precautions should always be followed, including the following:

1. Read and understand all instructions and all safety warnings before operating lift.

2. Care must be taken as burns can occur from touching hot parts.

3. Do not operate equipment with a damaged conduit or if the equipment has been dropped or damaged until it has been examined by a qualified service person.

4. Do not let a conduit come in contact with hot manifolds or moving fan blades.

5. To reduce the risk of fire, do not operate equipment in the vicinity of open containers of flammable liquids (gasoline).

6. Adequate ventilation should be provided when working on operating internal combustion engines.

7. Keep hair, loose clothing, fingers, and all parts of body away from moving parts. Keep feet clear of lift when lowering. Avoid pinch points.

8. Tighten all fasteners to meet recommended torque specifications found on page 42 of this manual.

9. Use only as described in this manual. Use only manufacturer’s recommended attachments.

10. ALWAYS WEAR SAFETY GLASSES. Everyday eyeglasses only have impact resistant lenses, they are not safety glasses.

12. DO NOT override self-closing lift controls.

13. Guard against electric shock. This lift must be grounded while in use to protect operator from electric shock. Never connect the green power cord wire to a live terminal. This is for ground only.

14. Only trained operators should operate this lift. All non-trained personnel should be kept away from the work area. Never let non-trained personnel come in contact with, or operate lift.

15. WARNING! RISK OF EXPLOSION. This equipment has internal arcing or sparking parts which should not be exposed to flammable vapors. This machine should not be located in a recessed area or below floor level.

16. Clear area if vehicle is in danger of falling.

17. ALWAYS make sure the safeties are engaged before attempting to work on or near a vehicle.

18. MAINTAIN WITH CARE. Keep lift clean for better and safer performance. Follow manual for proper lubrication and maintenance instructions. Keep control handles and/or buttons dry, clean and free from grease and oil.

19. Check for damaged parts. Check for alignment of moving parts, breakage of parts or any condition that may affect operation of lift. Do not use lift if any component is broken or damaged.

20. NEVER remove safety related components from the lift. Do not use lift if safety related components are missing or damaged.

21. STAY ALERT. Use common sense and watch what you are doing. Remember, SAFETY FIRST.

SAVE THESE INSTRUCTIONS
**STEP 1**

(Selecting Site)

Before installing your new lift, check the following:

1. **LIFT LOCATION:** Always use architectural plans when available. Check the layout dimension against the floor plan requirements, making sure that adequate space is available.

2. **OVERHEAD OBSTRUCTIONS:** The area where the lift will be located should be free of overhead obstructions such as heaters, building supports, electrical lines, etc.

3. **DEFECTIVE FLOOR:** Visually inspect the site where the lift is to be installed and check for cracked or defective concrete.

4. **This Lift is designed for INDOOR/OUTDOOR INSTALLATION.** Always follow warnings illustrated on equipment labels.

**STEP 2**

(Floor Requirements)

**WARNING**

A level floor is suggested for proper use and installation and level lifting. If a floor is of questionable slope, consider a survey of the site and/or the possibility of pouring a new level concrete slab.

**TOOLS REQUIRED**

- Rotary Hammer Drill or Similar
- 3/4” Masonry Bit
- Hammer
- 4 Foot Level
- Open-End Wrench Set: SAE/Metric
- Socket And Ratchet Set: SAE/Metric
- Hex-Key / Allen Wrench Set
- Large Crescent Wrench
- Large Pipe Wrench
- Crow Bar
- Chalk Line
- Medium Flat Screwdriver
- Tape Measure: 25 Foot Minimum
- Needle Nose Pliers

**IMPORTANT NOTICE**

THESE INSTRUCTIONS MUST BE FOLLOWED TO INSURE PROPER INSTALLATION AND OPERATION OF YOUR LIFT. FAILURE TO COMPLY WITH THESE INSTRUCTIONS CAN RESULT IN SERIOUS BODILY HARM AND VOID PRODUCT WARRANTY. MANUFACTURER WILL ASSUME NO LIABILITY FOR LOSS OR DAMAGE OF ANY KIND, EXPRESSED OR IMPLIED, RESULTING FROM IMPROPER INSTALLATION OR USE OF THIS PRODUCT.

PLEASE READ ENTIRE MANUAL PRIOR TO INSTALLATION

<th>CONCRETE REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>PLT-6S</td>
<td>4” Min. Thickness / 3,000 PSI</td>
</tr>
</tbody>
</table>

**IMPORTANT NOTE**

BendPak lifts are supplied with installation instructions and concrete fasteners meeting the criteria as prescribed by the American National Standard “Automotive Lifts - Safety Requirements for Construction, Testing, and Validation” ANSI/ALI ALCTV-2006. Lift buyers are responsible for any special regional structural and/or seismic anchoring requirements specified by any other agencies and/or codes such as the Uniform Building Code (UBC) and/or International Building Code (IBC).
DANGER

When removing the lift from shipping angles, pay close attention as the ramps can slide and can cause injury. Prior to removing the bolts, make sure the ramps are held securely by a fork lift or some other heavy lifting device.

PARTS INVENTORY

Be sure to take a complete inventory of major parts prior to beginning installation.

** Special Voltages Available upon Request.

The design, material and specifications are subject to change without notice. Version A
STEP 3  
(Base Frame Assembly)

1. Place chalk lines on the floor according to the floor plan layout. Pay attention to the clearances needed with respect to the placement of your lift location. (See Fig 3.1)

2. Make sure chalk lines are square as this layout will be your guide when bolting the lift permanently in this location.

NOTE:  
IT MAY BE HELPFUL TO MEASURE YOUR CHALK LAYOUT DIAGONALLY TO CHECK FOR SQUARE.

3. Place the Hose Channel Weldment upright (with the gussets upright) on the layout so that the rearmost edge of the Hose Channel Weldment touches the chalk line. Make certain that the Hose Channel Weldment is centered on the layout. (See Fig 3.2)

4. Locate the Left and Right Post Weldments. Place the Post Weldments within the chalk layouts, parallel with the Hose Channel Weldment, with the leg mounting plates facing upwards. When placing the post weldments inside the chalk layout, lay the bottom edge of the Left Post Weldment near the Left side chalk line and lay the bottom edge of the Right Post Weldment near the Right side chalk line. Both post straps on the two post weldments should be now facing the Hose Channel Weldment. (See Fig 3.3)

5. Locate the Left and Right Leg Weldments. The Leg Weldments may be differentiated by looking at the foot pads located on the bottom of the legs. The side of the leg weldments with the straps welded on will be on the outside of the lift. The leg that has its straps on the left side when its foot pads are set on the floor is the Left Leg Weldment. The leg that has its straps on the right side when its foot pads are set on the floor is the Right Leg Weldment. (See Fig 3.4)

6. Place the Left Leg Weldment on top of the Left Post Weldment. Align the bolt patterns of the Left Leg Weldment and the Left Post Weldment. Place the Right Leg Weldment on top of the Right Post Weldment. Align the bolt patterns of the Right Leg Weldment and the Right Post Weldment. (See Fig. 3.5)

NOTE:  
IT MAY BE HELPFUL TO PLACE WOOD BLOCKS, OR SIMILAR SPACING BLOCKS, UNDER THE LEFT AND RIGHT LEG WELDMENTS ON THE APPROACH END OF THE LEGS TO HELP FACILITATE BOLT HOLE ALIGNMENT. USE CARE TO NOT SCRATCH THE FINISH OF THE LIFT.
7. Using the provided M20 hardware, install six nuts, six bolts and six washers on both sides. (See Fig 3.6)

8. Raise the Left Post-Leg Assembly upright. (See Fig 3.7)

9. Locate the Power Unit Post Weldment.

10. Align the mounting holes of the Hose Channel Weldment, the Left Post-Leg Assembly and the Power Unit Post Weldment. Using the provided M20 hardware, install three nuts, three bolts, and three washers to mate the assembly together. (See Fig 3.8)

11. Repeat Items 8 and 9 of Step 3 for the mating of the Right Post-Leg Assembly and the Hose Channel Weldment.

12. The Base Frame Assembly is now complete. Do not anchor the Base Frame at this time. (See Fig 3.9)

**WARNING**

This step requires lifting of very heavy components. Be sure to use the correct lifting tools such as a forklift or crane to position components. Pay attention to component position once component is lifted. Once lifted, component is a falling hazard. Failure to use the correct lifting tools or to pay attention during lifting may result in personal injury or death. A minimum of a two person installation team is recommended for safe lifting practices.
STEP 4  
(Lift Arm Assembly)

1. Locate the Left and Right Lift Arm Weldments. The Lift Arms may be differentiated by the gusset orientation. The Lift Arm Gussets are always located on the outboard sides of the lift. (See Fig 4.1)

2. Locate the Roller Bar Weldment. The chamfered feature of the ear plates will be facing towards the approach end of the lift. (See Fig. 4.2)

3. Assemble the Left and Right Lift Arm Weldments to the Roller Bar Weldment. Align the mounting holes and install eight sets of M10 nuts, bolts, and washers (four per arm) for both Left and Right sides. The two sets of bolts are left over for the Lift Arm Roller Pin installations. (See Fig 4.3 - 4.4)

4. Locate the Lift Arm Slide Blocks and Spacers. The Slide Blocks are to be installed with the flanges oriented away from the inside of the lift. Align the Slide Block holes with the pin thru holes in the Lift Arm Assembly. Insert the Slide Block Pins through the aligned holes and Spacers and fasten the Pins to the assembly with the remaining sets of M10 hardware. (See Fig 4.5)

5. The Lift Arm is now assembled. (See Fig 4.6)
STEP 5
(Lift Arm Assembly Installation)

WARNING

THIS STEP REQUIRES LIFTING OF A VERY HEAVY COMPONENT. BE SURE TO USE THE CORRECT LIFTING TOOLS SUCH AS A FORKLIFT OR CRANE TO POSITION COMPONENTS. PAY ATTENTION TO COMPONENT POSITION ONCE COMPONENT IS LIFTED. ONCE LIFTED, COMPONENT IS A FALLING HAZARD. FAILURE TO USE THE CORRECT LIFTING TOOLS OR TO PAY ATTENTION DURING LIFTING MAY RESULT IN PERSONAL INJURY OR DEATH. A MINIMUM OF A TWO PERSON INSTALLATION TEAM IS RECOMMENDED FOR SAFE LIFTING PRACTICES.

1. The Lift Arm Assembly will be assembled with two pivot pins and two retaining clips. Lift the Lift Arm Assembly, as completed in Step 4, into position so that both Lift Arm pivots are in between their respective arm clevises and align the holes. (See Fig. 5.1)

2. Once the bores are aligned with their respective thru holes, insert the Lift Arm Pivot Pin. The pins' shoulders must be located on the “in” side of the lift. The notch in the pin's shoulder should be fitted to the welded on pin stop. (See Fig. 5.2 - 5.3)

3. Once pins have been inserted, install the provided retaining clips to secure the pins in place. (See Fig. 5.4)

4. Using a Needle Point Lubrication Tool, inject lubricant into the hole in both Lift Arm Pivot Pins to lubricate the assembly. (See Fig. 5.5)

5. The Lift Arm Assembly installation is now complete.
**STEP 6**  
**(Ramp Installation Preparation)**

1. Locate the Post Rollers and slide one Post Roller down into each post. (See Fig 6.1)

![Fig 6.1](image)

2. Locate the two Leveling Bars and install them on to the Lift Arms. Find the Leveling Bar end with the two thru holes. Orient the Leveling Bar so that the bend is facing inward, place an Arm Spacer Bearing onto the pin, and slip the outermost hole over the Lift Arm Leveling Pin. (See Fig 6.2-6.3)

![Fig 6.2](image)

**NOTE:**  
GREATER UNDERRAMP CLEARANCE MAY BE POSSIBLE WHEN THE LEVELING BAR IS INSTALLED SO THAT THE LIFT ARM LEVELING PIN IS IN THE INNERMOST HOLE POSITION. THIS WILL INCREASE THE RAMP LIFTING ANGLE.

![Fig 6.3](image)

**WARNING**  
MAKE CERTAIN THE TWO LEVELING BARS ARE IN THE SAME PIN POSITION PRIOR TO OPERATION OF LIFT. FAILURE TO ENSURE BOTH BARS ARE IN THE SAME PIN POSITION WILL CAUSE LIFT MALFUNCTION AND VOID WARRANTY.

![Fig 6.4](image)

**STEP 7**  
**(Ramp & Safety Bar Installation)**

1. Locate the two Ramp Channel Weldments. The Left and Right side may be differentiated by the Post Roller Plate at the rear and the open section of channel of each Ramp Side Weldment facing the outside of the lift. (See Fig 7.1)

![Fig 7.1](image)

2. Insert a Post Roller Pin through each of the two Roller Plates on the two Ramp Channel Weldments. (See Fig 7.2)

![Fig 7.2](image)

3. Install four M10 x 25 bolts to secure the Post Roller Pins on to both Ramp Channel Weldments. (See Fig 7.3)

![Fig 7.3](image)
4. Slip the Arm Spacer and Arm Spacer Bearing on to each Post Roller Pin. (See Fig 7.4)

5. Take both Ramp Channel Weldments and align the Post Roller Pins, Leveling Arms, and Post Rollers in preparation for assembly.

6. Place Arm Spacer Bearings in between the Post Rollers and the Leveling Arms and insert the Post Roller Pins through the Leveling Arm, Arm Spacer Bearing and Post Roller on each side. (See Fig 7.5)

7. The Ramp Channel Weldments are now installed. Be careful to not disturb them as they are still not secure. (See Fig 7.6)

8. Lift the Ramp Weldment into the center of the lift in between the two Ramp Channel Weldments. Orient the Ramp Weldment so that the lower section of the ramp faces away from the approach side and align the mounting holes. (See Fig 7.7)
9. Install six sets of M10 bolts, washers, and nuts to fasten the Ramp Weldment to the Ramp Side Weldments. (See Fig 7.8)

**STEP 8**
(Tire Stop Bar Installation)

1. Locate the Tire Stop Bar Weldments. Orient the Tire Stop Bar so that the bar angles away from the lift and align the mounting holes. (See Fig 8.1)

2. Use the supplied M10 bolts, washers, and hex nuts to securely fasten the Tire Stop Bar to the Ramp Assembly. (See Fig 8.2)

---

**STEP 9**
(Drive-Up Ramp & Deck Installation)

**WARNING**

THIS STEP REQUIRES LIFTING OF A VERY HEAVY COMPONENT. BE SURE TO USE THE CORRECT LIFTING TOOLS SUCH AS A FORKLIFT OR CRANE TO POSITION COMPONENT. PAY ATTENTION TO COMPONENT POSITION ONCE COMPONENT IS LIFTED. ONCE LIFTED, COMPONENT IS A FALLING HAZARD. FAILURE TO USE THE CORRECT LIFTING TOOLS OR TO PAY ATTENTION DURING LIFTING MAY RESULT IN PERSONAL INJURY OR DEATH. A MINIMUM OF A TWO PERSON INSTALLATION TEAM IS RECOMMENDED FOR SAFE LIFTING PRACTICES.

1. Locate the Drive-Up Ramp Weldment. Orient the Drive-Up Ramp so that the bars protruding from the Drive-Up Ramp point towards the Ramp Assembly. (See Fig 9.1)

2. Install a M12 x 70mm adjustment screw and jam nut to each side of the Drive-Up Ramp. (See Fig 9.2)

3. Lift the Drive-Up Ramp Weldment and align the thru holes of the Drive-Up Ramp bars to the Ramp Assembly. The bars should slide in between the strap and the ramp channel on both Ramp Channels. (See Fig 9.3)
4. Place a Drive-Up Ramp Pin through each of the aligned holes to fasten the Drive-Up Ramp to the Ramp Assembly. (See Fig 9.4)

5. Secure the Drive-Up Ramp Pins by installing E-Ring retaining rings in the snap ring grooves in the pins. (See Fig 9.5)

6. Install the four Deck Channel Weldments next. Orient the Deck Channel Weldments so that the “open” side of the channel face towards the ground. Use M10 bolts, washers, and nuts to fasten the Deck Channel Weldments to the Ramp Side Weldments. (See Fig 9.6)

7. Place the Deck Plates on top of the Deck Channel Weldments. The “lip” of the Front Deck Plate will overlap the Center Deck Plate. The Center Deck Plate “lip” will overlap the Ramp Weldment. Align the mounting holes and use the M6 Pan Head Phillips Screws, M6 spring lock washers, and M6 nuts to mount the Deck Plates to the Deck Channels. (See Fig 9.7-9.8)
STEP 10
(Cylinder Installation)

1. To install a cylinder, align the thru holes of the Cylinder Clevis of the Cylinder Tube end and the Cylinder Clevis Brackets. Install Cylinder Clevis Pin through the thru holes and secure pin with 2 E-Rings. Make sure the Cylinder Hydraulic Ports face toward the post. (See Fig 10.1)

2. Install the Rod End Connector to the Cylinder Rod if it has not been installed already. Thread Rod End Connector on to Cylinder Rod until Connector threads are fully engaged. (See Fig 10.2)

3. In order to connect the Rod End Connector to the lift it is necessary to first extend the Hydraulic Cylinder. Remove both Cylinder port plugs then use an air gun or come-along to extend the Cylinder. Once fully extended, align the thru holes of the Rod End Connector and the Clevis Plates of the Lift Arm. Insert the Lift Arm Clevis Pin through the holes and secure it with 2 E-Rings. Install the Rubber Grommet into the hole in the Leg Weldment at this time, if it has not been installed already. (See Fig 10.3 - 10.4)

4. Install the supplied 90° -04 JIC to -06 NPT fitting to the lower port and the 90° Push-to-connect Air Fitting to the upper port. Apply Teflon tape to the NPT threads on the fitting prior to installation. (See Fig 10.5)

**WARNING**

DO NOT exceed 50 PSI. If cylinder does not move immediately STOP and use a come-along or other Pulling device. Keep hands clear.
5. Repeat Items 1 - 4 to install the second cylinder.

6. Cylinder installation is now complete. (See Fig 10.6)

**STEP 11**  
(Control Arm Installation)

**NOTE:**  
THE CONTROL ARM MAY BE INSTALLED ON EITHER THE RIGHT OR LEFT HAND SIDE OF THE LIFT. FOR CLARITY THIS MANUAL WILL ONLY SHOW THE CONTROL ARM INSTALLED ON THE LEFT SIDE OF THE LIFT.

1. Locate the Control Arm Weldment and align the mounting holes with the mounting holes on the Post Weldment. Make sure the Control Arm is oriented so that the Arm Tube is angled upwards. NOTE: It may be helpful to route the Control Pendant cable at this time. (See Fig 11.1)

2. Bolt the Control Arm Weldment and the Post Weldment together using the supplied M10 bolts, nuts, and washers. NOTE: Make sure to insert the 140mm long bolt through the top hole in both SIDES of the post and the 25mm long bolt through the bottom hole. (See Fig 11.2)

**STEP 12**  
(Lift Anchoring)

**IMPORTANT NOTE:**  
BendPak lifts are supplied with installation instructions and concrete fasteners meeting the criteria as prescribed by the American National Standard "Automotive Lifts - Safety Requirements for Construction, Testing, and Validation" ANSI/ALI ALCTV-2006. Lift buyers are responsible for any special regional structural and/or seismic anchoring requirements specified by any other agencies and/or codes such as the Uniform Building Code (UBC) and/or International Building Code (IBC).

1. Before proceeding, make certain the lift is positioned with proper clearances around and overhead. (See clearances section on page 5)

2. Locate the 4 anchor points. (See Fig. 12.1)

3. Using the Foot Pad as a guide, drill each anchor hole in the concrete (approximately 4" deep) using a rotary hammer drill and 3/4" concrete drill-bit. To ensure full holding power, do not ream the hole or allow the drill to wobble. (See Fig. 12.2)
4. After drilling the anchor holes, remove the dust thoroughly from each hole using compressed air and/or wire brush. (See Fig 12.3)

5. Assemble the washers and nuts on the anchors then tap into each hole with a hammer until the washer rests against the base. (See Fig. 12.4 - 12.5)

6. With the anchor bolts in place, tighten nut three to five turns past finger tight. DO NOT use an impact wrench for this procedure. (See Fig. 12.6)

7. The Post restraints (if any were used) may now be removed.

8. Attach the Tire Guard Weldments using M10 x 25 hex bolts, nuts and washers. Make sure that the open side of the Guard faces the OUTSIDE of the lift. (See Fig 12.7)
IMPORTANT POWER-UNIT INSTALLATION NOTES

- DO NOT run power unit without oil. Damage to pump can occur.
- The power unit must be kept dry. Damage to power unit caused by water or other liquids such as detergents, acid etc., is not covered under warranty.
- Improper electrical connection can damage motor and will not be covered under warranty.
- Motor can not run on 50HZ without a physical change in the motor.
- Use a separate breaker for each power unit.
- Protect each circuit with time delay fuse or circuit breaker.
- For 208-230 volt, single phase, use a 25 amp fuse.
- For 208-230 volt, three phase, use a 20 amp fuse.

Installation and adjustment:
DO NOT attempt to raise vehicle until a thorough operation check has been completed.

ALL WIRING MUST BE PERFORMED BY A CERTIFIED ELECTRICIAN.
STEP 13
(Power Unit Electrical Connection)

**DANGER**

ALL WIRING MUST BE PERFORMED BY A LICENSED ELECTRICIAN.

**WARNING**

DO NOT RUN POWER UNIT WITHOUT OIL. DAMAGE TO POWER UNIT PUMP CAN OCCUR. THE POWER UNIT MUST BE KEPT DRY. DAMAGE TO POWER UNIT CAUSED BY WATER OR OTHER LIQUIDS SUCH AS DETERGENTS, ACID ETC., IS NOT COVERED UNDER WARRANTY.

OPERATE LIFT ONLY BETWEEN TEMPERATURES OF 41 °- 104° F. IMPROPER ELECTRICAL HOOK-UP CAN DAMAGE MOTOR AND WILL NOT BE COVERED UNDER WARRANTY. MOTOR CAN NOT RUN ON 50HZ WITHOUT A PHYSICAL CHANGE IN THE MOTOR.

USE A SEPARATE CIRCUIT BREAKER FOR EACH POWER UNIT. PROTECT EACH CIRCUIT WITH TIME DELAY FUSE OR CIRCUIT BREAKER.

FOR 208-230 VOLT, SINGLE PHASE, USE A 25 AMP FUSE.
FOR 208-230 VOLT, THREE PHASE, USE A 20 AMP FUSE.

1. Have a certified electrician run the power supply to motor. Refer to the data plate found on the motor for proper power supply and wire size. SEE WIRING INSTRUCTIONS AFFIXED TO MOTOR FOR PROPER WIRING INSTRUCTIONS.

---
STEP 14  
(Hydraulic, Air and Electrical Line Routing)

1. Mount the Power Unit and Vibration Dampener to the Power Unit Post Weldment using the M8 hex bolts and Nylock Nuts. Fill the reservoir with 4 gallons of 10-WT hydraulic oil or Dexron III automatic transmission fluid. (See Fig. 14.1)

2. Remove the shipping plugs from both ports prior to installing the fittings. Install the 90° Hydraulic Fitting to the POWER PORT and the 90° Air Fitting to the RETURN PORT of the Power Unit. On the pipe thread side of the Air Fitting it is recommended to use Teflon tape or pipe sealer. (See Fig. 14.2)

3. Connect one end of the Power Side Hose and the 90° end of the Off Side Hose to the Tee Fitting. Connect the Male-to-Female 90° fitting to the tee Fitting. Connect the Power Unit Hose to the 90° fitting. (See Fig. 14.3)

4. Route the Power Side and Off Side hoses through the Rubber Grommets that were installed in Step 10 and connect the hoses to the JIC elbow fittings on the cylinders. DO NOT use Teflon tape on the JIC fitting end. (See Fig. 14.4)

5. Connect the 1/4” air line tubing to the 90° Air Fittings and Air Tee Fitting using the same routes used for the Hydraulic Hoses. Cut the air line tubing with a sharp blade to lengths as required. Tubing must be cut square with no burrs.

   **Note:** To assemble air line tubing into fittings, use firm, manual pressure to push tubing into the fitting until it bottoms out. To remove air line tubing from the fitting, hold push sleeve in (against fitting) and, at the same time, pull out on tubing. Pay careful attention to keep air line clear of any pinch points.

6. Install the provided Liquid Tight Conduit and Fittings. (See Fig 14.5)
7. Route the Electrical Cable from the Control Pendant through the Control Arm Weldment and Conduit to the Power Unit and connect according to the wiring diagrams found on page 22 and 23. (See Fig 14.6)

8. Ensure the Safety Placard is attached to the lift in plain view of the Control Pendant.

**STEP 15**
(Lift Start Up)

1. Make sure the Power Unit reservoir is full with four (4) gallons of 10-WT hydraulic oil or Dexron-III automatic transmission fluid.

2. Spray the inside of the posts with a light spray-oil.

3. Connect power supply and test the Power Unit by pressing the Up push-button switch on the Control Pendant. If the motor sounds like it is operating properly, raise the lift and check all hose connections for leaks. If the motor gets hot or sounds peculiar, STOP and check all electrical connections.

4. Raise lift until each cylinder is fully retracted and the lift stops. Place support stands or a fork lift underneath the ramp to support it during the next step.

**DANGER**

Because the safety has not been installed yet, DO NOT work on or near raised lift until support stands are in place to support the platform. Always ensure support stands are engaged before any attempt is made to work on or near the lift / vehicle.

**STEP 16**
(Safety Installation)

1. With the ramp raised and supported securely, locate the Safety Weldment and Safety Bar Strap.

2. Place the Safety Weldment under the ramp so that the Safety Latches are completely on BOTH Safety Pins. Fasten the Safety Weldment to the Ramp Channels using the Safety Bar Straps and the provided M10 hex bolts and nylock nuts making sure the Straps are moved to the furthest outward position. (See Fig 16.1)

3. Once the Safety is connected to the lift, lower the lift by pressing the Down push button on the Control Pendant until the lift stops. The lift should now be resting on the safeties. If it is not, lower the lift all the way to the ground and make sure the lift did not shift during installation and test the safety again.

4. Install one Bulkhead Terminal in the hole in the Ramp Channel after the Safety Bar Strap and the other in the Cable Standoff Plate in the Drive Up ramp on the same side of the lift. (See Fig 16.2)

6. Attach the Safety Arm to the Drive Up Ramp using the M10 x 38 hex bolt, two jam nuts, spring lock washer and Small Spacer. (See Fig 16.3)

7. Assemble Safety Spring on the M10 x 50 hex bolt using a jam nut, nylock nut and Long Spacer. Assemble the Safety Wheel using the M8 nylock nut. (See Fig 16.4)

8. Insert the Wire Rope Conduit Assembly into the Drive Up Ramp Bulkhead Terminal and feed the push/pull cable through the small hole in its head. Slide the cable crimp on and make a small loop in the cable and crimp with pliers. After this is done, hook the spring to the cable. (See Fig 16.5)

9. Insert the other end of the Wire Rope Conduit Assembly into the Ramp Channel Bulkhead Terminal and feed the push/pull cable through the small hole in its head. (See Fig 16.6)

10. Thread one M6 hex nut and washer onto the threaded shaft past the hole in the shaft. Then insert the cable end through the hole. Thread the other nut and washer onto the shaft and tighten while making sure the cable is centered in the hole. (See Fig 16.7)

**STEP 17**

*(Bleeding the Cylinder)*

1. Lift must be fully lowered before changing or adding fluid.

2. Raise and lower lift six times. The cylinder is self-bleeding. After bleeding system, fluid level in Power Unit reservoir may be low. Add more fluid, if necessary, to raise lift to full height. It is only necessary to add fluid to raise lift to full height.

3. To pressure test, raise lift to full rise and run motor for approximately 3-seconds after lift stops. This will put pressure on the hydraulic system. Stop and check all fittings and hose connections. Tighten or reseal if required.
POST-INSTALLATION CHECKLIST

- Anchor bolts tightened
- Pivot pins properly attached
- Electric power supply confirmed
- Safety locks functioning properly
- Check for hydraulic leaks and oil level
- Lubrication of critical components
- Check for overhead obstructions
- All screws, bolts, and pins secured
- Surrounding area clear
- Safety Placard is attached to lift
- Operation, maintenance and safety manuals on site

STEP 18
(Operation)

To Raise Lift:
1. Load vehicle onto the lift as far forward on the lift as possible.
2. Set parking brake to hold vehicle in position.
3. Before raising vehicle, be sure all personnel are clear of the lift and surrounding area. Pay careful attention to overhead clearances.
4. Raise the lift to the Safety Lock height by pressing the UP button on the Control Pendant.
5. After vehicle is raised to the Safety Lock height, lower the lift onto the safety lock by pressing the DOWN button. ALWAYS ENSURE ALL SAFETY LOCKS ARE ENGAGED before entering lift area.

To Lower Lift:
1. Before lowering vehicle, be sure all personnel are clear of the lift and surrounding area. Pay careful attention to overhead clearances. Ensure all tools and equipment have been cleared from under the lift.
2. Raise the lift off of the safety locks by pressing the UP button on the Control Pendant. Make sure to raise the lift by at least two inches to allow adequate clearance for the locks to clear.
3. Manually release the Safety Arm by lowering it into the down position.
4. Push the DOWN BUTTON on the Control Pendant until the lift has descended completely.

When lowering the lift, PAY CAREFUL ATTENTION that all personnel and objects are kept clear. ALWAYS keep a visual line of sight on the lift AT ALL TIMES. ALWAYS make sure that ALL LOCKS are disengaged. If the locks inadvertently locks on descent, the lift and/or vehicle may disrupt causing personal injury or death.
SAFE LIFT OPERATION

Automotive and truck lifts are critical to the operation and profitability of your business. The safe use of this and other lifts in your shop is critical in preventing employee injuries and damage to customer’s vehicles. By operating lifts safely you can insure that your shop is profitable, productive and safe. Safe operation of automotive lifts requires that only trained employees should be allowed to use the lift.

TRAINING SHOULD INCLUDE, BUT NOT LIMITED TO:

- Proper positioning of the vehicle on the runway. (See manufacturers minimum wheel base loading requirements.)
- Use of the operating controls.
- Understanding the lift capacity.
- Proper use of jack stands or other load supporting devices.
- Proper use, understanding and visual identification of safety lock devices and their operation.
- Reviewing the safety rules.
- Proper housekeeping procedures. (Lift area should be free of grease, oil, tools, equipment, trash, and other debris.)
- A daily inspection of the lift should be completed prior to its use. Safety devices, operating controls, lift arms and other critical parts should be inspected prior to using the lift.
- All maintenance and repairs of the lift should be completed by following the manufacturer’s requirements. Lift repair parts should meet or exceed OEM specifications. Repairs should only be completed by a qualified lift technician.
- The vehicle manufacturer’s recommendations should be used for spotting and lifting the vehicle.

LIFT OPERATION SAFETY

- It is important that you know the load limit. Be careful that you do not overload the lift. If you are unsure what the load limit is, check the data plate found on one of the lift columns or contact the manufacturer.
- Lift should be operated ONLY by trained personnel.
- Always make sure you have proper overhead clearance. Additionally, check that attachments (vehicle signs, campers, antennas, etc.) are not in the way.
- Be sure that prior to the vehicle being raised, the doors, trunk, and hood are closed securely.
- Prior to being raised, make sure there is no one standing closer than six feet from the lift.
- After positioning the vehicle on the lift runways, set the emergency brake, make sure the ignition is off, the doors are closed, overhead obstructions are cleared, and the transmission is in park (neutral for manual transmissions).
- Double check that the automatic chock devices are in position, and then when the lift is raised, observe the chocks.
- The lift should be raised just until the vehicle’s wheels are about one foot off the ground. If contact with the vehicle is uneven or it appears that the vehicle is not sitting secure, carefully lower the lift and readjust.
- Use floor boundaries marking to establish designated areas for safe lift clearances and operation.
- Always consider potential problems that might cause a vehicle to slip, i.e., heavy cargo, undercoating, etc.
SAFE LIFT OPERATION

♦ DO NOT leave the controls while the lift is still in motion.

♦ DO NOT stand directly in front of the vehicle or in the bay when vehicle is being loaded or driven into position.

♦ DO NOT go near vehicle or attempt to work on the vehicle when being raised or lowered.

♦ REMAIN CLEAR of lift when raising or lowering vehicle.

♦ DO NOT rock the vehicle while on the lift or remove any heavy component from vehicle that may cause excessive weight shift.

♦ DO NOT lower the vehicle until people, materials, and tools are clear.

♦ ALWAYS ENSURE that the safeties are engaged and lowered onto the safety pins before any attempt is made to go near the bottom vehicle.

♦ READ AND UNDERSTAND all safety warning procedures before operating lift.

♦ KEEP HANDS AND FEET CLEAR. Remove hands and feet from any moving parts. Keep feet clear of lift when lowering. Avoid pinch points.

♦ ONLY TRAINED OPERATORS should operate this lift. All non-trained personnel should be kept away from work area. Never let non-trained personnel come in contact with, or operate lift.

♦ USE LIFT CORRECTLY. Use lift in the proper manner. Never use lifting adapters other than what is approved by the manufacturer.

♦ DO NOT override self-closing lift controls.

♦ CLEAR AREA if vehicle is in danger of falling. When lift is being lowered, make sure everyone is standing at least six feet away.

♦ STAY ALERT. Watch what you are doing. Use common sense. Be aware.

♦ CHECK FOR DAMAGED PARTS. Check for alignment of moving parts, breakage of parts or any condition that may affect its operation. Do not use lift if any component is broken or damaged.

♦ NEVER remove safety related components from the lift. Do not use lift if safety related components are damaged or missing.

♦ Be sure there are no jacks, tools, or equipment left under the lift before lowering.

♦ Always lower the vehicle slowly and smoothly.

♦ The center of gravity should be followed closely to what the manufacturer recommends.
SAFE LIFT OPERATION

LIFT SAFETY TRAINING

Safe operation of YOUR PLT-6S lift requires that only trained employees should be allowed to work with this equipment. FAILURE TO OPERATE THIS CAR LIFT AS DIRECTED MAY CAUSE INJURY OR DEATH. To fulfill operator’s safety training requirements, you may choose these available options:

1. LMS Online Training.
2. Visit factory to get required training.
3. Onsite training with a factory representative.

LIFT OPERATION DURING ABNORMAL CONDITIONS AND EMERGENCIES

**WARNING**

IN CASE OF POWER FAILURE OR POWER OUTAGE, DO NOT ATTEMPT TO OPERATE THIS LIFT OR BRING THE CAR TO THE GROUND. WAIT UNTIL THE SOURCE OF THE PROBLEM IS SOLVED AND IF AFTER RECONNECTING THE POWER STILL YOU EXPERIENCE TECHNICAL DIFFICULTIES, CONTACT BENDPAK’S SERVICE CENTER AT: 1-805-933-9970 TO REQUEST A QUALIFIED SERVICE TECHNICIAN TO REPAIR THE LIFT.

**WARNING**

IN CASE OF A BROKEN OIL LINE, BROKEN CONTROLS OR MISSING KEY, DO NOT ATTEMPT TO OPERATE THE LIFT. CONTACT BENDPAK’S SERVICE CENTER AT: 1-805-933-9970 TO REQUEST A QUALIFIED SERVICE TECHNICIAN TO REPAIR THE LIFT.

FOR TECHNICAL SUPPORT:
1-800-253-2363  EXT. 196

TO ORDER PARTS:
1-800-253-2363  EXT. 191

BENDPAK / RANGER 1-805-933-9970
A

WARNING

- CAUTION! For installation in non-hazardous locations only.
- WARNING! Read all the instructions before operating this Vehicle Lift System.
- WARNING! RISK OF INJURY OR DEATH. This Vehicle Lift System shall ONLY be operated by authorized, trained and qualified personnel. Do not operate if people are present on or near the lift.
- CAUTION: To access your vehicle on the platform lower the vehicle to the ground level first, DO NOT climb the lift.
- The Vehicle's Transmission shall be in "PARK" and the Parking Brake shall be set.
- The Driver & Passengers shall exit the vehicle prior to operation of the lift.
- Maximum Load Capacity of the lift is 6,000 lbs.
- DANGER! Risk of injury and damage to the Lift System. DO NOT lift a vehicle exceeding 6,000 lbs.
- Maximum dimensions of the vehicle on this lift shall not exceed:
  - Height 56" for low height installed lift.
  - Height 61" for high height installed lift.
  - Wheelbase 125"
- DANGER! RISK OF INJURY OR DEATH. Do not attempt to modify or re-adjust the lift. In case of any malfunction or damage to the lift system, DO NOT operate the lift. Contact the manufacturer’s authorized and qualified representative at 800-633-8970 for repair or replacement.

B

CAUTION

For continued protection against risk of fire, replace ONLY with a fuse of the same type and having the same electrical rating.

C

![Diagram with warning text]

Manufacturer: BendPak
Model Designation: Double stacker parking lift
Serial Number: PLT-6S
3 Phase: 230VAC, 2.5 Hp, 11A, 60Hz

WARNING! Electrical Shock Hazard. Do NOT remove cover. Refer servicing to qualified service personnel.
WARNING! Read all the instructions before operating this equipment.
CAUTION! For installation in non-hazardous locations only.

D

![Diagram with warning text]

Manufacturer: BendPak
Model Designation: Double stacker parking lift
Serial Number: PLT-6S
3 Phase: V208-230/480, 2 Hp, 6.5/3/3.3, 60 Hz

WARNING! Electrical Shock Hazard. Do NOT remove cover. Refer servicing to qualified service personnel.
WARNING! Read all the instructions before operating this equipment.
CAUTION! For installation in non-hazardous locations only.

E

![Diagram with warning text]

Manufacturer: BendPak
Model Designation: Double stacker parking lift
Serial Number: PLT-6S
3 Phase: V208-230/480, 7.5 Hp, A10.9-17.8/8.90, 60 Hz

WARNING! Electrical Shock Hazard. Do NOT remove cover. Refer servicing to qualified service personnel.
WARNING! Read all the instructions before operating this equipment.
CAUTION! For installation in non-hazardous locations only.
DANGER

THE MAXIMUM LIFTING CAPACITY FOR THIS LIFT IS DESCRIBED BELOW

<table>
<thead>
<tr>
<th>Maximum Lifting Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>6000 Lbs. / 2722 Kg.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>3000 Lbs. / 1361 Kg.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Maximum Lifting Capacity / Rear Axle(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3000 Lbs. / 1361 Kg.</td>
</tr>
</tbody>
</table>

Exceeding the weight capacity of this lift can damage lift and/or property and may cause personal harm, injury or death to operators and/or bystanders. All vehicles MUST be positioned on lift with CENTER OF GRAVITY midway between adapters and/or centered on runways. Damage to lift due to overloading or misuse IS NOT covered under warranty.
The messages and pictographs shown are generic in nature and are meant to generally represent hazards common to all automotive lifts regardless of specific style.

Funding for the development and validation of these labels was provided by the Automotive Lift Institute, PO Box 33116 Indialantic, FL 32903.

They are protected by copyright. Set of labels may be obtained from ALI or its member companies.

PARKING LIFT
OPERATION WARNINGS

Read the entire operation manual, and operation instructions shown on the reverse side of this placard before operating this parking lift. If any questions arise as to the safety or operation of this lift contact your property manager, building engineer, local parking lift dealer or call BendPak at 1 (805) 933-9970. Always use caution when operating this lift. Never allow children or persons under the influence of drugs or alcohol to use this lift. Serious injury, property damage, and/or death can occur if this lift is improperly used.

**WARNING**

ALWAYS double-check under clearance BEFORE driving vehicle under lift platform.

**WARNING**

Never place any object or any part of your body on the legs or any other part of the lift during operation. Serious injury or death can occur.

**WARNING**

- Read the entire operation manual before operating this parking lift.
- NEVER leave the lift unattended when it is partially raised or lowered.
- DO NOT raise the lift platform when the lift is empty. The lifts are designed to be lowered with the weight of a vehicle on the platform. Empty lifts will take much longer to lower.
- Always use caution when operating this lift. Never allow children or persons under the influence of drugs or alcohol to use this lift.
- Serious injury, property damage, and/or death can occur if this lift is improperly used.
- Keep hands and feet clear. Remove hands and feet from any moving parts. Keep feet clear of lift when lowering. Avoid pinch points.
- Only trained operators should operate this lift. All non-trained personnel should be kept away from work area. Never let non-trained personnel come in contact with, or operate lift.
- Guard against electric shock. This lift must be grounded while in use to protect the operator from electric shock.
- Risk of explosion. This lift has internal arcing or sparking parts which should not be exposed to flammable vapors.
- Maintain lift with care. Keep lift clean for better and safe performance. Follow manual for proper lubrication and maintenance instructions. Keep control handles and/or buttons dry, clean and free from grease and oil.
- Stay alert - watch what you are doing. Use common sense and always be aware.
- Check for damaged parts. Check for alignment of moving parts, breakage of parts or any condition that may affect safe operation of the lift. Do not use lift if any component is broken or damaged.
- Never remove safety related components from the lift. Do not use lift if safety related components are damaged or missing.

**IMPORTANT NOTE**

The custom lock-setting of the lift determines the height of the vehicles that can be safely parked underneath the lift. Make sure that you are using only vehicles that are of the proper height for the custom lock-setting. If the setting of your lift needs to be changed, contact your parking lift dealer.
PARKING LIFT
OPERATION INSTRUCTIONS

Read the entire operation manual and warning instructions shown on the reverse side of this placard before operating this parking lift.

PRE-LIFTING STAGE
1. Drive top vehicle onto the elevating platform. Vehicles may be driven in nose first or backed in.
2. Drive until the top vehicle’s forward tires rest against the forward wheel stop.
3. Turn off car engine, engage safety brake, and place the vehicle’s gear selector in Park. If vehicle is manual transmission, place the transmission in first gear.
4. Walk to the rear of the platform and lift up on the red handle to engage the rear tire stops.
5. Check the front of the lift to make sure that the vehicle’s forward tires are securely set against the wheel stop.
6. Walk around the lift to ensure no obstructions will interfere with the vehicle being lifted.
7. Position yourself in front of the lift within reach of the operator control console.

LIFTING STAGE
1. Once all precautions above are followed, check around and above the lift to ensure that no objects are in the platform’s way, and that no persons (except the lift operator) are within 10 feet.
2. To raise the lift platform with top vehicle to desired height, turn the operator switch on the control console to the right position and hold.
3. During operation, observe the entire perimeter of the lift as well as overhead to ensure there are no obstructions that may damage vehicle and / or lift.
4. ALWAYS raise the platform until it reaches its top custom-set lock position.
5. If a low ceiling is overhead be careful when lifting. NEVER allow the top vehicle to come in contact with any overhead structure or object.
6. Once top position is reached, release the operator switch to its neutral position then turn and hold the operator switch to the left position to lower the platform with vehicle onto the lift’s mechanical locks. Hold the operator switch in the left position until the platform is resting securely on the locks.
7. Walk around, never under the raised platform.

REMOVAL OF LOWER VEHICLE
1. Carefully drive out the lower vehicle after making sure all is clear before lowering the lift platform.

LOWERING THE LIFT
1. Walk around the lift to make sure nothing is below or near the lift platform’s entire lower area to prepare for descent.
2. Be certain that no person (except the lift operator) is within 10 feet of the lift area.
3. Turn and hold the operator switch to the right position to elevate the lift approximately two inches or enough to allow release of the mechanical locks and release operator switch to its neutral position.
4. While pulling back and holding the lock release safety lever located below the control console, turn and hold the operator switch to the left position to lower the lift platform with top vehicle.
5. When lowering the lift always be watchful for objects, persons or animals that may wander under the lift platform during operation. Cease operation if area becomes obstructed.
6. KEEP HANDS AND FEET CLEAR OF ALL MOVING PARTS AND PINCH POINTS.
7. Release the lock release safety lever and operator switch upon full decent of platform.
8. Walk to the rear of the lift and lower the wheel stops / ramps.
9. Carefully drive out the lower vehicle after making sure all is clear before lowering the lift platform.

PLACEMENT OF LOWER VEHICLE
1. Once all precautions of the Pre-Lifting and Lifting Stage have been followed, drive the lower vehicle under the lift platform until the forward tires reach the front wheel bar, or, to the location where the car is properly positioned under the lift to allow clearance of the doors and mirrors.
2. Turn off the engine, set the parking brake and place in the gear selector in Park, or place manual transmission in gear.

P/N 5905569
LIFT WILL NOT RAISE

POSSIBLE CAUSE
1. Air in oil (1,2,8,13)
2. Cylinder binding (9)
3. Cylinder leaks internally (9)
4. Motor run backward under pressure (11)
5. Lowering valve leaks (3,4,6,10,11)
6. Motor runs backwards (7,14,11)
7. Pump damaged (10,11)
8. Pump won't prime (1,8,13,14,3,12,10,11)
9. Relief valve leaks (10,11)
10. Voltage to motor incorrect (7,14,11)

REMEDY
1. Check for proper oil level. The oil level should be up to the bleed screw in the reservoir with the lift all the way down.
3. Flush release valve to get rid of. Hold release handle down and start unit allowing possible contamination it to run for 15 seconds.
4. Dirty oil. Replace oil with clean Dexron ATF.
5. Tighten all fasteners. Tighten fasteners to recommended torques (see chart on pg. 38).
6. Check for free movement of release. If handle does not move freely, replace bracket or handle assembly.
7. Check if motor is wired correctly. Compare wiring of motor to electrical diagram on drawing.
8. Oil seal damaged or cocked Replace oil seal around pump shaft.
10. Replace with new part Replace with new part.
12. Check pump-mounting bolts Bolts should be 15 to 18 ft. lbs.
13. Inlet screen clogged Clean inlet screen or replace.
14. Check wall outlet voltages and wiring Make sure unit and wall outlet are wired properly.
MOTOR WILL NOT RUN

POSSIBLE CAUSE
1. Fuse blown (5,2,1,3,4)
2. Limit switch burned out (1,2,3,4)
3. Microswitch burned out (1,2,3,4)
4. Motor burned out (1,2,3,4,6)
5. Voltage to motor incorrect (2,1,8)

REMEDY   INSTRUCTION
1. Check for correct voltage . . . . . . . . . . . . . . . . . . . . . . . . . . Compare supply voltage with voltage on motor name tag. Check that the wire is sized correctly. N.E.C. table 310-12 requires AWG 10 for 25 Amps.

2. Check motor is wired correctly . . . . . . . . . . . . . . . . . . . . . . . Compare wiring of motor to electrical diagram on drawing.

3. Don’t use extension cords . . . . . . . . . . . . . . . . . . . . . . . . . . According to N.E.C. : “ The size of the conductors...should be such that the voltage drop would not exceed 3% to the farthest outlet for power…”. Do not run motor at 115 VAC – damage to the motor will occur.

4. Replace with new part . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Replace with new part.

5. Reset circuit breaker/fuse . . . . . . . . . . . . . . . . . . . . . . . . . . . Reset circuit breaker/fuse.

6. Return unit for repair . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Return unit for repair.

8. Check wall outlet voltage and wiring . . . . . . . . . . . . . . . . . . Make sure unit and wall outlet is wired properly. Motor must run at 208/230 VAC.

LIFT LOWERS SLOWLY OR NOT AT ALL

POSSIBLE CAUSE
1. Cylinders binding, (1)
2. Release valve clogged, (5,4,2,3)
3. Pressure fitting too long, (6)

REMEDY   INSTRUCTION
1. See Installation Manual . . . . . . . . . . . . . . . . . . . . . . . . . . . Contact BendPak Customer Support.

2. Replace with new part . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Replace with new part.

3. Return for repair . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Return for repair.

4. Check oil. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Use clean 10-WT hydraulic oil or Dexron-III automatic transmission fluid only. If ATF is contaminated, replace with clean ATF and clean entire system.

5. Clean release valve . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . Wash release valve in solvent and blow out with air.

6. Replace fitting with short thread lead . . . . . . . . . . . . . . . . . . . . Replace fitting with short thread lead.
WILL NOT RAISE LOADED LIFT

POSSIBLE CAUSE
1. Air in oil (1,2,3,4)
2. Cylinder binding (5)
3. Cylinder leaks internally (5)
4. Lift overloaded (6,5)
5. Lowering valve leaks (7,8,1,5,9)
6. Motor runs backwards (10,12,9)
7. Pump damaged (5,9)
8. Pump won’t prime (1,2,3,4,5,11,9)
9. Relief valve leaks (8,5,9)
10. Voltage to motor incorrect (10,12,5)

REMEDY
1. Check oil level
   The oil level should be up to the bleed screw in the reservoir with the lift all the way down.

2. Check/Tighten inlet tubes
   Replace inlet hose assembly.

3. Oil seal damaged or cocked
   Replace oil seal and install.

4. Bleed cylinders

5. See Installation Manual
   Contact BendPak Customer Support.

6. Check vehicle weight
   Compare weight of vehicle to weight limit of the lift.

7. Flush release valve
   Hold release handle down and start unit allowing it to run for 15 seconds.

8. Replace with new part
   Replace with new part.

9. Return unit for repair
   Return unit for repair.

10. Check motor is wired correctly
    Compare wiring of motor to electrical diagram on power unit drawing.

11. Inlet screen clogged
    Clean inlet screen or replace.

12. Check wall outlet voltage and wiring
    Make sure unit and wall outlet is wired properly.
LIFT WILL NOT STAY UP

POSSIBLE CAUSE
1. Air in oil (1,2,3)
2. Check valve leaks (6)
3. Cylinders leak internally (7)
4. Lowering valve leaks (4,5,1,7,6)
5. Leaking fittings (8)

REMEDY
1. Check oil level .............................................
   The oil level should be up to the bleed screw in the reservoir with the lift all the way down.

2. Oil seal damaged and cocked ..............................
   Replace oil seal around pump shaft.

3. Bleed cylinder ..............................................
   Refer to Installation Manual.

4. Flush release valve ........................................
   Hold release handle down and start unit allowing it to run for 15 seconds.

5. Replace with new valve .................................
   Replace with new valve.

6. Return unit for repair .................................
   Return unit for repair.

7. See Installation Manual ..............................
   Contact BendPak Customer Support.

8. Check complete hydraulic system for leaks ........
   Tighten all hydraulic fittings and inspect all hoses.
Lubrication Locations

Lubrication Locations

Inject Lubricant Here

Lubricate Inside of Posts

Inject Lubricant Here

NOTE: Lubrication procedure should be performed on both the right side and left side of the lift.

MAINTENANCE

If you are not completely familiar with parking lift maintenance procedures STOP and contact factory or lift dealer for instructions. To avoid personal injury, permit only qualified personnel to perform maintenance on this equipment.

- **Always** check and adjust all bolts that may be loose. Keep bolts tight.
- **Always** keep lift components clean. Clean off the platform and all areas susceptible to debris.
- **Always**, if oil leakage is observed, call local service representative.
- **Always**, if electrical problems develop, call local service representative.
- **Daily**: Check all moving parts for wear. Replace worn parts as required with genuine BendPak parts.
- **Daily**: Inspect entire lift and all moving components for damage or excessive wear. Replace as required with genuine BendPak parts.
- **Monthly**: Check safety lock operation. Adjust per lift installation instructions.
- **Monthly**: Use a heavy weight axle bearing grease on all pins and pivot points.
- **Monthly**: Check hydraulic connections for leaks.
- **Monthly**: Lubricate locking latch pivot points. Operate handle several times for oil to penetrate pivot points.
- **EVERY 3 MONTHS**: Check anchor bolts for tightness. Anchors should torque to 90 ft/lbs.
- **SEMI-ANNUALLY**: Check fluid level of lift power unit and refill if required per lift installation instructions.
- **Replace** all caution, warning or safety related decals on the lift if unable to read or missing. Reorder labels from factory or lift dealer.
- **Replace** hydraulic fluid with AW Type 32 every 5 to 10 years, depending on frequency of use

If replacement parts need to be used in order to return the Car Lift to factory operating condition, please contact factory or lift dealer to obtain these parts. Please use only factory original components to ensure safe operation.

## Pre-Install Agreement

I, (the undersigned) acting as the owner of the business listed above assume responsibility for any permits required, either state or county mandated, related to the installation and/or operation of this equipment. I assume responsibility for the concrete floor and condition thereof, now or later, where the above equipment model(s) are installed. I will assume all liability for losses, damages (including loss of use), expenses, demands, claims, and judgments in connection with or arising out of any personal injury or alleged damage to property, sustained or alleged to have been sustained in connection with, or to have arisen out of the condition and/or drilling of the concrete near or adjacent to the equipment model(s) listed above. If my employee(s) offer assistance of any kind during installation of the above equipment model(s) I hold the manufacturer and installation company harmless of all liability for losses, damages, expenses, claims, and judgments in connection with or arising out of any personal injury or alleged damage to property, sustained or alleged to have been sustained in connection with the installation of the above equipment model(s).

I understand that the lifts above are supplied with concrete fasteners meeting the criteria of the American National Standard "Automotive Lifts - Safety Requirements for Construction, Testing, and Validation" ANSI/ALI ALCTV-1998, and that I will be responsible for all charges related to any special regional structural and/or seismic anchoring requirements specified by any other agencies and/or codes such as the Uniform Building Code (UBC) and/or International Building Code (IBC).

## Post-Installation Check-Off

- [ ] Base and Columns Properly Shimmed And Stable
- [ ] Anchor Bolts Tightened
- [ ] Runways Properly Attached and Secured
- [ ] Electric Power Supply Confirmed
- [ ] Cables / Chains Adjusted Properly
- [ ] Safety Locks Functioning Properly
- [ ] Check For Hydraulic Leaks
- [ ] Oil Level
- [ ] Lubrication of Critical Components
- [ ] Lift Adapters
- [ ] Check For Overhead Obstructions
- [ ] Runways Level
- [ ] All Screws, Bolts, and Pins Secured
- [ ] Surrounding Area and Lift Clean In Appearance
- [ ] Proper Operation, Maintenance and Safety Explained
- [ ] Operation and Safety Manual(s) Left at Site

I, (the undersigned) confirm that the above installation procedure(s) were completed. I understand that I will be responsible for maintaining this equipment as outlined in the accompanied Installation and Operation Manual and ANSI/ALI ALOIM Safety Requirements for Operation, Inspection and Maintenance. I understand that personal injury and/or damage to property can occur if the above equipment model(s) are not maintained or used improperly and take full responsibility for training my employees on proper use and maintenance of this equipment. I hold the manufacturer and installation company harmless of all liability for losses, damages (including loss of use), expenses, demands, claims, and judgments in connection with or related to improper use, improper training, or lack of required maintenance. I understand that the warranty does not cover replacement of parts worn or damaged due to normal use or lack of required maintenance.
