RECEIVING
The shipment should be thoroughly inspected as soon as it is received. The signed Bill of Lading is acknowledgement by the shipping carrier as receipt of this product as listed in your invoice as being in a good condition of shipment. If any of these goods listed on this Bill of Lading are missing or damaged, do not accept goods until the shipping carrier makes a notation on the freight bill of the missing or damaged goods. Do this for your own protection.

BE SAFE
Your new tire changer was designed and built with safety in mind. However, your overall safety can be increased with proper training and thoughtful operation on the part of the operator. DO NOT operate or repair this equipment without reading this manual and the important safety instructions shown inside. Keep this operation manual near the tire changer at all times. Make sure that ALL USERS read and understand this manual.
This instruction manual has been prepared specifically for you. Your new Ranger Tire Changer is the product of over 40 years of continuing research, testing and development; it is the most technically advanced tire changer on the market today. The manner in which you care for and maintain your tire changer will have a direct effect on its overall performance and longevity.

READ THIS ENTIRE MANUAL BEFORE INSTALLATION & OPERATION BEGINS

RECORD HERE YOUR TIRE CHANGER INFORMATION WHICH IS LOCATED ON THE SERIAL NUMBER DATA PLATE.

This information will be required when calling for parts or warranty issues.
Only replace parts with Ranger approved parts.

PRODUCT WARRANTY

Your new tire changer is covered under warranty for one year on equipment structure; one year on all operating components and tooling/accessories, to the original purchaser, to be free of defects in material and workmanship. The manufacturer shall repair or replace at their option for this period those parts returned to the factory freight prepaid which prove upon inspection to be defective. The manufacturer will pay labor costs for the first 12 months only on parts returned as previously described.

The warranty does not extend to...
- defects caused by ordinary wear, abuse, misuse, negligence, shipping damage, improper installation, voltage or lack of required maintenance;
- damages resulting from purchaser’s neglect or failure to operate products in accordance with instructions provided in the owner’s manual(s) and/or other accompanying instructions supplied;
- normal wear items or service normally required to maintain the product in a safe operating condition;
- any component damaged in shipment;
- other items not listed but may be considered general wear parts;
- damage caused by rain, excessive humidity, corrosive environments or other contaminants.

THESE WARRANTIES DO NOT EXTEND TO ANY COSMETIC DEFECT NOT INTERFERING WITH EQUIPMENT FUNCTIONALITY OR ANY INCIDENTAL, INDIRECT, OR CONSEQUENTIAL LOSS, DAMAGE, OR EXPENSE THAT MAY RESULT FROM ANY DEFECT, FAILURE, OR MALFUNCTION OF A BENDPAK INC. / RANGER PRODUCT OR THE BREACH OR DELAY IN PERFORMANCE OF THE WARRANTY.

WARRANTY IS NOT VALID UNLESS WARRANTY CARD IS RETURNED

NOTE:

Although every effort has been taken to ensure the accuracy of this manual, some information may contain technical incorrectness or typographical errors. BendPak/Ranger assumes no responsibility or liability for damages incurred directly or indirectly as a result of any imprecisions, omissions or discrepancies. Information and specifications are subject to change without notice.
BEFORE YOU BEGIN

NOTIFY THE CARRIER AT ONCE if any hidden loss or damage is discovered after receipt and request the carrier to make an inspection. If the carrier will not do so, prepare a signed statement to the effect that you have notified the carrier (on a specific date) and that the carrier has failed to comply with your request.

IT IS DIFFICULT TO COLLECT FOR LOSS OR DAMAGE AFTER YOU HAVE GIVEN THE CARRIER A CLEAR RECEIPT. Support claim with copies of the bill of lading, freight bill, invoice, and photographs, if available. BendPak’s willingness to assist in helping you process your claim does not make BendPak responsible for collection of claims or replacement of lost or damaged materials.

IMPORTANT NOTICE

Do not attempt to install this tire changer if you have never been trained on basic automotive service equipment installation procedures. Never attempt to lift components without proper lifting tools such as a forklift or cranes. Stay clear of any moving parts that can fall and cause injury. These instructions must be followed to ensure proper installation and operation of your tire changer. Failure to comply with these instructions can result in serious bodily harm and void product warranty. Manufacturer will assume no liability for loss or damage of any kind, expressed or implied resulting from improper installation or use of this product.

SECTION 1

PLEASE READ ENTIRE MANUAL PRIOR TO INSTALLATION

OWNER’S RESPONSIBILITY

To maintain the equipment and user safety, the responsibility of the owner is to read and follow these instructions:

♦ Follow all installation and operation instructions.
♦ Make sure installation conforms to all applicable Local, State, and Federal Codes, Rules, and Regulations; such as State and Federal OSHA Regulations and Electrical Codes.
♦ Carefully check the equipment for correct initial function.
♦ Read and follow the safety instructions. Keep them readily available for machine operators.
♦ Make certain all operators are properly trained, know how to safely and correctly operate the unit, and are properly supervised.
♦ Allow unit operation only with all parts in place and operating safely.
♦ Carefully inspect the unit on a regular basis and perform all maintenance as required.
♦ Service and maintain the unit only with authorized or approved replacement parts.
♦ Keep all instructions permanently with the unit and all decals on the unit clean and visible.

DEFINITIONS OF HAZARD LEVELS

Identify the hazard levels used in this manual with the following definitions and signal words:

⚠️ DANGER

Watch for this symbol as it means: Immediate hazards which will result in severe personal injury or death.

⚠️ WARNING

Watch for this symbol as it means: Hazards or unsafe practices which could result in severe personal injury or death.

⚠️ CAUTION

Watch for this symbol as it means: Hazards or unsafe practices which may result in minor personal injury, product or property damage.

INSTALLER / OPERATOR PROTECTIVE EQUIPMENT

Personal protective equipment helps makes installation and operation safer, however, it does not take the place of safe operating practices. Always wear durable work clothing during any installation and/or service activity. Shop aprons or shop coats may also be worn, however loose-fitting clothing should be avoided.

Tight-fitting leather gloves are recommended to protect the technician’s hands when handling parts. Sturdy leather steel-toe work shoes and oil resistant soles should be used by all service personnel to help prevent injury during typical installation and operation activities.

Eye protection is essential during installation and operation activities. Safety glasses with side shields, goggles, or face shields are acceptable. Back belts provide support during lifting activities and are also helpful in providing worker protection. Consideration should also be given to the use of hearing protection if service activity is performed in an enclosed area, or if noise levels are high.
DANGER

FAILURE TO FOLLOW DANGER, WARNING, AND CAUTION INSTRUCTIONS MAY LEAD TO SERIOUS PERSONAL INJURY OR DEATH TO OPERATOR OR BYSTANDER OR DAMAGE TO PROPERTY. PLEASE READ THE ENTIRE MANUAL PRIOR TO INSTALLATION.

WARNING

DO NOT OPERATE THIS MACHINE UNTIL YOU HAVE READ AND HAVE UNDERSTOOD ALL OF THE DANGER, WARNING AND CAUTION ALERTS IN THIS MANUAL. FOR ADDITIONAL COPIES OR FURTHER INFORMATION, CONTACT:

Bendpak Inc.
1645 Lemonwood Dr.
Santa Paula, CA. 93060
1-805-933-9970
www.bendpak.com

CAUTION

The safe operating temperature range for this product is 41° F. - 104 °F.

THIS SYMBOL POINTS OUT IMPORTANT SAFETY INSTRUCTIONS WHICH IF NOT FOLLOWED COULD ENDANGER THE PERSONAL SAFETY AND/OR PROPERTY OR YOURSELF AND OTHERS AND CAN CAUSE PERSONAL INJURY OR DEATH. READ AND FOLLOW ALL INSTRUCTIONS IN THIS MANUAL BEFORE ATTEMPTING TO OPERATE THIS MACHINE.
SECTION 2- IMPORTANT SAFETY INSTRUCTIONS

Read these safety instructions entirely. Do not attempt to install this machine if you have never been trained on basic garage equipment installation procedures. Never attempt to lift components without proper lifting tools such as forklifts or cranes. Stay clear of any moving parts that may fall and cause injury. When using your garage equipment, basic safety precautions should always be followed, including the following:

1. Read and understand all instructions and all safety warnings before operating service equipment.

2. Care must be taken as burns can occur from touching hot parts.

3. Do not operate equipment with a damaged cord or if the equipment has been dropped or damaged until it has been examined by a qualified service person.

4. Do not let a cord hang over the edge of the table, bench, or counter or come in contact with hot manifolds or moving fan blades.

5. If an extension cord is necessary, a cord with a current rating equal to or more than that of the equipment should be used. Cords rated for less current than the equipment may overheat. Care should be taken to arrange the cord so that it will not be tripped over or pulled.

6. Always unplug equipment from electrical outlet when not in use. Never use the cord to pull the plug from the outlet. Grasp plug and pull to disconnect.

7. Let equipment cool completely before putting away. Loop cord loosely around equipment when storing.

8. To reduce the risk of fire, do not operate equipment in the vicinity of open containers of flammable liquids (gasoline). Keep exterior of motor free of oil, solvent, or excessive grease.

9. Keep hair, loose clothing, fingers, and all parts of body away from moving parts. Avoid pinch points.

10. DANGER! To reduce the risk of electric shock, do not use on wet surfaces or expose to rain. The electronics used on this equipment contain high voltage. Disconnect power at the receptacle or at the circuit breaker switch before performing any electrical repairs. Secure plug so that it cannot be accidentally plugged in during service. Or mark circuit breaker switch so that it cannot be accidentally switched on during service.

11. DANGER! The motor on this machine contains high voltage. Disconnect power at the receptacle before performing any electrical repairs. Secure plug so that it cannot be accidentally plugged in during service.

12. Use only as described in this manual. Use only manufacturer’s recommended attachments.

13. Do not attempt to operate this equipment if you have never been trained on basic tire service and mounting / demounting procedures.

14. ALWAYS WEAR SAFETY GLASSES. Everyday eyeglasses only have impact resistant lenses, they are not safety glasses.

15. Consider work environment. Keep work area clean. Cluttered work areas invite injuries. Keep areas well lit.

16. Guard against electric shock. This equipment must be grounded while in use to protect operator from electric shock. Never connect the green power cord wire to a live terminal. This is for ground only.

17. Only trained operators should operate this machine. All non-trained personnel should be kept away from the work area. Never let non-trained personnel come in contact with, or operate machine.

18. WARNING! RISK OF EXPLOSION. This equipment has internal arcing or sparking parts which should not be exposed to flammable vapors. This machine should not be located in a recessed area or below floor level.

19. MAINTAIN WITH CARE. Keep equipment clean for better and safer performance. Follow manual for proper lubrication and maintenance instructions. Keep control handles and/or buttons dry, clean and free from grease and oil.

20. Check for damaged parts. Check for alignment of moving parts, breakage of parts or any condition that may affect operation of machine. Do not use machine if any component is broken or damaged.

21. NEVER remove safety related components from the equipment. Do not use machine if safety related components are missing or damaged.

22. DRESS PROPERLY. Non-skid steel-toe footwear is recommended when operating machine.

23. Illegible and missing warning labels must be replaced immediately. Do not use the tire changer if one or more labels are missing. Do not add any object that could prevent the operator from seeing the labels.

24. STAY ALERT. Use common sense and watch what you are doing. Remember, SAFETY FIRST.

SAVE THESE INSTRUCTIONS
SECTION 3
TIRE AND WHEEL SERVICE
SAFETY INSTRUCTIONS

ALWAYS wear durable personal protective work clothing and safety gear during tire service activity. Refer to page three for Operator Protective Equipment.

ALWAYS remove all wheel weights and the valve core to deflate the tire before servicing.

ALWAYS keep all working surfaces clean and free of debris.

ALWAYS be aware of what each person is doing - and what they will do before attempting any two-person operation.

ALWAYS cover the electric motor and all electrical components before cleaning the tire changer. Be sure water or cleaner does not enter the motor or electrical components or come in contact with electrical connections.

ALWAYS disconnect the electric power and air supply before attempting any maintenance.

DEMOUNTING & MOUNTING

ALWAYS clean and inspect the wheel prior to any service.

NEVER stand on the sliding carriage, frame or work table while demounting or mounting a tire.

ALWAYS keep hands, feet, and other objects away from moving parts while the machine is turned on.

ALWAYS place the narrow bead seat to the outside when clamping. Failure to demount the tire from the narrow bead seat side may cause damage to the tire beads.

ALWAYS apply an approved rubber lubricant to rim flanges and both tire beads before demounting or mounting and seating the beads.

NEVER mount a tire on a damaged or rusty wheel as tire or wheel failure may result during inflation. Explosion from failure may result in severe injury or death of the operator and bystanders.

INFLATION

ALWAYS be sure the bead opposite the tool is in the drop center before rotating the tire when demounting or mounting to avoid damage to the tire beads.

ALWAYS follow all applicable Local, State, and Federal Codes, Rules, and Regulations; such as the Federal OSHA Standard Number 1910.177.

ALWAYS use an approved inflation chamber or inflation cage equipped with a self-gripping chuck and remote inflation gauge and valve.

ALWAYS inflate the tire to manufacturer’s recommended cold operating pressure.

DO NOT OVER INFLATE! Tire or wheel failure during and after inflation may result in an explosion capable of causing severe injury or death.

NEVER reinflate a tire that has been run under inflated or flat without first demounting the tire and checking for wheel and tire damage.

ALWAYS inspect the tire interior for loose or broken cords, cuts, penetrating objects, and other damage. Discard tires that cannot be properly repaired.

NEVER rework, weld, heat or braze wheels.

NEVER strike the tire or wheel with a hammer.

ALWAYS be sure the tire diameter exactly matches the wheel diameter.

TIRE FAILURE UNDER PRESSURE CAN BE HAZARDOUS. WHEN POSSIBLE, ALWAYS PLACE WHEELS INSIDE AN APPROVED INFLATION CHAMBER OR CAGE BEFORE INFLATING. USE AN APPROVED REMOTE INFLATION VALVE, HOSE, AND GAUGE. ALWAYS WEAR SAFETY GOGGLES FOR EYE PROTECTION. DO NOT STAND BESIDE THE WHEEL OR CAGE DURING INFLATION. KEEP HANDS AND OTHER PARTS OF THE BODY OUT OF THE CAGE DURING INFLATION.

OBSERVE THE TIRE PRESSURE FREQUENTLY. DO NOT EXCEED THE MANUFACTURER’S RECOMMENDED MAXIMUM INFLATION PRESSURE. FAILURE TO FOLLOW THESE INSTRUCTIONS MAY CAUSE THE TIRE AND RIM TO SEPARATE WITH TREMENDOUS FORCE, RESULTING IN SERIOUS PERSONAL INJURY OR DEATH.
SECTION 4 - DESCRIPTION OF PARTS - R980XR

1. Tank Pressure Relief Valve
2. Tower (Air Tank)
3. Tool Tray
4. Air Drier / Oiler (See Fig 4.2)
5. Bead Breaker Arm
6. Bead Breaker Blade
7. Bead Breaker Pad
8. Bead Lifting Tool
9. Turntable Foot Pedal (See Fig 4.3)
10. Bead Breaker Foot Pedal (See Fig 4.3)
11. Wheel Clamp Foot Pedal (See Fig 4.3)
12. Soap Bucket
13. Turntable
14. Wheel Clamps
15. Mount / Demount Head
16. Turbo Blast Hose Assembly
17. Helper Disc (Not included on R980XR)
18. Assist Tower Pusher Block (Not included on R980XR)
19. Assist Tower Controls (Not included on R980XR)
20. Assist Tower (Not included on R980XR)
21. Vertical Shaft
22. Vertical Assist Arm Assembly
23. Vertical Shaft Lock Handle
24. Vertical Shaft Spring
25. n/a
26. Inflation Pedal (Located on left of cabinet. See Fig 4.4)
27. Inflation Restraint Device
SECTION 4 - DESCRIPTION OF PARTS - R980AT

1. Tank Pressure Relief Valve
2. Tower (Air Tank)
3. Tool Tray
4. Air Drier / Oilier (See Fig 4.2)
5. Bead Breaker Arm
6. Bead Breaker Blade
7. Bead Breaker Pad
8. Bead Lifting Tool
9. Turntable Foot Pedal
10. Bead Breaker Foot Pedal
11. Wheel Clamp Foot Pedal
12. Soap Bucket
13. Turntable
14. Wheel Clamps
15. Mount / Demount Head
16. Turbo Blast Hose Assembly (See Fig. 4.3)
17. Helper Disc
18. Assist Tower Pusher Block
19. Assist Tower Controls
20. Assist Tower
21. Vertical Shaft
22. Vertical Assist Arm Assembly
23. Vertical Shaft Lock Handle
24. Vertical Shaft Spring
25. n/a
26. Inflation Pedal. (Located on Left of Cabinet. See Fig 4.4)
27. Inflation Restraint Device

### Standard Features

- Wheel Clamping Method (adjustable clamps)
- Table Clamping System
- Bead Breaking System
- Tool Holder
- Inflation Gauge With Integrated Air Dump Valve
- Inflation Pressure Regulator/Limiter
- Water Filter
- Oiler / Lubricator
- Air Regulator
- Breaker Bar
- Large Soap / Lubricator Bucket
- Brush
- Alloy-Steel Mount/Demount Head
- Plastic-Polymer Mount/Demount Head
- Tower Design
- Inflation Restraint Device
- Bead Seating System
- Tool Tray / Bin Storage
- Motorcycle Turntable Clamps

### TOOLS REQUIRED FOR ASSEMBLY AND INSTALLATION

- Pallet jack or forklift for moving crate
- Forklift or Shop crane
- Utility knife
- Crow bar or pry bar.
- Tin Snips or Sheet Metal Snips
- Hammer
- Open end metric wrenches and/or socket set
- Phillips and Slot head screw drivers
- Metric Allen Key set

### Parts Required But Not Supplied:

- Teflon Tape
- Air fitting to match shop Air Supply line
- Tool Oil Parts Required But Not Supplied
- Anchor Bolts and Shims (if Anchoring)
SECTION 6
LIFTING/ UN-CRATING

1. The unit is shipped on a pallet. Approximate shipping dimensions are shown below. (See Fig 6.1)

Remember to report any shipping damage to the carrier and make a notation on the delivery receipt.

UN-CRATING INSTRUCTIONS

1. Using a crow bar or pry bar, locate the metal tabs and pry open the tabs and or staples. (See Fig 6.3)

2. The entire wooden frame/box can be lifted off after prying the tabs/staples at the base of the crate. (See Fig 6.4)

3. Carefully cut the Tire Changer free of the plastic wrapping securing it to the Tire Changer base. Do not unwrap the Assist Tower and Tower Tank at this time. The wrapping helps keep the Swing Arms from moving during lifting and assembly. (See Fig 6.5 - 6.6)

CAUTION

HANDLING OF THE MACHINE MUST BE PERFORMED ONLY WITH AN APPROPRIATE LIFTING DEVICE SUCH AS A FORKLIFT OR PALLET JACK. ONLY PERSONNEL WHO ARE EXPERIENCED AND QUALIFIED ON MATERIAL HANDLING PROCEDURES SHOULD HANDLE ANY TRANSPORTATION OR MOVING OF MACHINE.

BE CAREFUL WHEN CUTTING STEEL BANDING MATERIAL AS ITEMS MAY BECOME LOOSE AND FALL CAUSING PERSONAL HARM OR INJURY. ALWAYS WEAR GLOVES WHEN UN-CRATING THE MACHINE TO PREVENT SCRATCHES, ABRASIONS, OR CUTS DUE TO THE CONTACT WITH PACKING MATERIALS.

EYE PROTECTION IS ESSENTIAL DURING UN-CRATING SERVICE ACTIVITY. SAFETY GLASSES WITH SIDE SHIELDS, GOGGLES, OR FACE SHIELDS ARE ACCEPTABLE.
5. Either cut or unscrew the metal strapping holding the Air Tank / Assist Tower to the pallet. Using a fork lift or shop crane, remove tank from the pallet and set aside. Secure tank so it can not fall. (See Fig 6.7)

6. Remove the two front and rear bolts and nuts fastening the tire changer to the pallet, as indicated in the images below. (See Fig 6.8 - 6.9)

7. Using a shop crane or fork lift, remove the Tire Changer from the wooden pallet, making sure to follow safe material handling procedures. (See Fig 6.10)
SECTION 7
INSTALLATION LOCATION

DANGER

Disconnect tag and lock out power source before attempting to install, service, relocate or perform any maintenance. Do not lift or move unit without appropriately rated equipment. Be sure the unit is securely attached to any lifting device used.

NEVER use the wood shipping skid for mounting the unit. Select a location using Figures 7.1 and 7.2. The area should provide the operator with enough space to use the equipment in a safe manner. The area selected should be well lit, easy to clean and should be away from oil, grease, brake lathe chips, etc. Avoid areas where bystanders and customers may be present.

PROPER UNIT INSTALLATION IS NECESSARY FOR SAFE USE AND EFFICIENT OPERATION. PROPER INSTALLATION ALSO HELPS PROTECT THE UNIT FROM DAMAGE AND MAKES SERVICE EASIER. ALWAYS KEEP THIS MANUAL WITH UNIT.

R980XR size is approximately:
43" W x 51" D X 80"H

R980AT size is approximately:
51" W x 45" D X 73"H

These measurements are the tire changer’s working range. Persons other than specially trained and authorized operators are expressly forbidden to enter this area. Choose a safe location that is in compliance with current work place safety regulations. Failure to properly install the tire changer can lead to improper and unsafe operation.
SECTION 8
AIR TANK/ TOWER ASSEMBLY

1. Using a fork lift or other lifting device, lower the Tank/ Tower onto the base and align the holes.

2. Attach the Tank / Tower assembly to the Base using the four bolts on the Tower Base Plate. (See Fig 8.1)

3. Connect the other end of the Air Inflation Hose to the Push to Connect Fitting underneath the Air Inflation Box Assembly. (See Fig 8.2)

SWING ARM / VERTICAL SHAFT / MOUNT-DEMOUNT HEAD ASSEMBLY

1. Raise the Vertical Shaft / Mount-demount head assembly to the highest position and lock it in place by pushing the Locking Handle up.

2. Check the Socket Head Cap Screw on the Cap, tighten if necessary. (See Fig 8.3)

3. Check the operation of the Vertical Shaft and the Locking Handle. (See Section 15, Page 31 for Lock adjustment details)

4. Check that the Mount/Demount Head bolt and set screws are tightened. (See Fig. 8.4)

ANCHORING

It is not essential to anchor the machine to the floor, however, the floor must be smooth and level. When anchoring to a concrete floor use the mounting holes that are provided in the frame. Make sure the machine is solid and level and supported evenly on all anchor points. Solid shims may be used if necessary. (See Fig 8.5)
SECTION 9
AIR SOURCE

This model requires a 14 to 15 CFM air source at 175 PSI maximum pressure. The safe operating pressure range for this model is between 110 PSI and 175 PSI at the machine. A 1/4” ID hose (or pipe) for connection to the machine is satisfactory. Sufficient air pressure assures good performance.

1. Connect the Air Supply to the Air Drier / Oiler. A proper fitting (not included) to match the supply line of the air supply connection is required. Use Teflon tape on the NPT thread of the fitting. This connection is located on the right side of the rear of the machine. (See Fig 9.1)

SECTION 10
ELECTRICAL SOURCE

1. This unit requires power from a 25 amp electrical circuit. Both models are supplied with 220 Volt power cords with no plug.

2. Refer to the serial tag of the machine for specific electrical requirements. Have a licensed electrical technician perform any necessary changes to the power source and power cord before plugging in the unit. The electrical source must have a solid connection between ground and building ground.

3. Observe the sight glass and adjust the oil flow of the oiler by turning the Oiler Adjustment Screw by using a small screwdriver so that 2-3 drops of oil drip through the sight glass for each operation of the Bead Breaker Pedal. (See Fig 9.3)

OILER ADJUSTMENT

1. Check Oil Level on Oil Level Gauge. (See Fig 9.2) If Oil level is low refer to Section 15, for filling instructions.

2. With the air source connected, depress the Bead Breaker Pedal to operate the Bead Breaker.

WARNING

FAILURE TO PROPERLY MAINTAIN PROPER OIL LEVEL AND ADJUST THE OIL FLOW MAY VOID THE WARRANTY AND DAMAGE THE BEAD BREAKER CYLINDER AND OTHER AIR COMPONENTS.
WARNING

THIS EQUIPMENT MUST BE GROUNDED WHILE IN USE TO PROTECT THE OPERATOR FROM ELECTRIC SHOCK. NEVER CONNECT THE GREEN POWER CORD WIRE TO A LIVE TERMINAL. THIS IS FOR GROUND ONLY.

DANGER

THE MOTOR ON THIS MACHINE CONTAINS HIGH VOLTAGE. DISCONNECT POWER AT THE RECEPTACLE BEFORE PERFORMING ANY ELECTRICAL REPAIRS. SECURE PLUG SO THAT IT CANNOT BE ACCIDENTALLY PLUGGED IN DURING SERVICE.

WARNING

RISK OF EXPLOSION! THIS EQUIPMENT HAS INTERNAL ARcing OR SPARKING PARTS WHICH SHOULD NOT BE EXPOSED TO FLAMMABLE VAPORS. THIS MACHINE SHOULD NOT BE LOCATED IN A RECESSED AREA OR BELOW FLOOR LEVEL.

WIRING INSTRUCTIONS

1. Check the voltage, phase and proper amperage requirements for the motor shown on the motor plate. Wiring should be performed by a certified electrician only.

2. Overheating, short circuits and fire damage will result from inadequate wiring. Wiring must be installed in accordance with National Electric Code and local codes and standards covering electrical apparatus and wiring.

3. Be certain that adequate wire sizes are used, and that:
   ♦ Service is of adequate amp rating.
   ♦ Supply line has the same electrical characteristics (voltage, cycles and phase) as the motor.
   ♦ The line wire is the proper size and that no other equipment is operated from the same line.

CAUTION

CHECK THE VOLTAGE, PHASE, AND PROPER AMPERAGE REQUIREMENTS FOR THE MOTOR SHOWN ON THE MOTOR PLATE. WIRING SHOULD BE PERFORMED BY A CERTIFIED ELECTRICIAN ONLY.

NOTE:

THIS UNIT MUST BE PROPERLY OPERATED AND MAINTAINED TO HELP AVOID ACCIDENTS THAT COULD DAMAGE THE UNIT AND INJURE THE OPERATOR OR BYSTANDERS. THIS SECTION OF THE EQUIPMENT MANUAL REVIEWS BASIC OPERATION AND USE OF CONTROLS. THESE INSTRUCTIONS SHOULD BE REVIEWED BY ALL OPERATORS BEFORE THEY ARE ALLOWED TO WORK WITH THE MACHINE. KEEP THESE INSTRUCTIONS NEAR THE MACHINE FOR EASY REFERENCE.

CAUTION

THIS MACHINE MAY OPERATE DIFFERENTLY FROM OTHER TIRE CHANGER MACHINES. PRACTICE WITH A REGULAR STEEL WHEEL AND TIRE COMBINATION TO FAMILIARIZE YOURSELF WITH THE MACHINE’S OPERATION AND FUNCTION.

♦ Remember to remove all weights from both sides of the wheel. Weights left on the back side of the wheel may cause
the wheel to be clamped un-level. This may result in the combination mount/demount head contacting the rim causing scratches. On alloy wheels, always rotate the wheel one turn after setting the head to ensure proper wheel chucking.

- Always review nicks and scratches with owners of expensive wheel and tire combinations prior to servicing.
- Review the performance wheel section of this manual prior to servicing performance tire/wheel combinations.

**Bead Loosening**

1. Deflate tire completely by removing the valve core from the valve stem. (See Fig 11.1)

2. The clamps on the table top may extend beyond the table top itself. To avoid damaging the clamps and/or wheel, move the clamps to their full inward position before positioning a tire for bead loosening.

3. Always loosen the bead on the narrow side of the wheels drop center first. (See Fig. 11.5 for description of the drop center)

4. Pull the bead breaker blade away from the machine and roll the wheel into position. If servicing a performance wheel or any other wheel with Tire Pressure Sensor (see section 12), make sure that the valve stem is either in the 12 o’clock or 6 o’clock position.

5. The Bead Breaker Arm Adjustment Rod limits or extends the movement of the arm. Set the Rod as appropriate to the tire and wheel being serviced. (See Fig. 11.2)

6. Position the bead breaker blade against the tire next to, but not on, the rim or the sidewall of the tire. Press the breaker pedal to actuate the blade and loosen the bead. It may be necessary to loosen the bead in multiple locations around the tire. Use extra care in positioning the bead breaker blade on larger wheels/tires, and on alloy wheels. (See Fig. 11.3)

7. Turn wheel around and repeat procedure on the other side of the wheel. This should be the long side of the drop center. It will be easier to clamp the wheel to the table top if the lower bead is loosened last. (See Fig. 11.4)

8. Determine the mounting side of the wheel. The mounting side is the narrow side of the drop center. (See Fig. 11.5)

**Wheel Configuration**

- Narrow Side
- Drop Center
- Long Side
The following instructions help identify how to properly mount wheels on the tire changer turntable. Failure to follow these instructions may lead to tire and/or wheel damage, equipment damage or failure, serious personal injury or death to operator or bystanders or damage to property.

**IMPORTANT WHEEL MOUNTING INSTRUCTIONS**

1. It is important to understand that tires and/or tire beads do not stretch. It is nearly impossible to mount or dismount the top bead of the tire unless the top bead of the tire is positioned deep into the drop center area of the wheel.

2. Find the position of the drop center on the wheel. Clearly identify the Drop Center, Narrow Side and Wide Side flanges.

3. The tire must ALWAYS be demounted or mounted with the wheel positioned on the turntable with the Narrow Side facing upward and the deepest part of the Drop Center facing upward.

---

**WARNING!** - The wheel illustrated above in diagram A has little or no prominent drop center. These are not DOT approved wheel configurations. The tire or wheel - or both - can be damaged during mounting procedures causing the tire to explode under pressure, resulting in serious injury or death. If you attempt to mount/demount this type of wheel, use extreme caution.

**IMPORTANT NOTE** – Most aftermarket and many OEM performance wheels are REVERSE DROP-CENTER configurations. These wheels MUST be mounted on the turntable with the hub or wheel-face POSITIONED DOWNWARD on the turntable and the Narrow Side and deep part of the Drop Center facing upward.
**WHEEL CLAMPING**

1. Place the Wheel Protector pads on the Wheel Clamps if desired when clamping from the outside. (See Fig 11.6)

2. Place tire/wheel assembly on Table Top with mounting side up. (See Fig 11.7)

3. Use the Wheel Clamp Foot Pedal to move the Clamps inward (pedal down) or outward (pedal up). (See Fig 11.8)

---

**DEMOUNTING**

1. Apply tire manufacturer’s approved rubber lubricant liberally to entire circumference of both upper and lower beads after loosening bead and placing on table top. (See Fig 11.9)

2. After the wheel is secured to the Turntable, swing the Vertical Arm into position. Use the large adjusting Knob to position the Mount/Demount Head directly over the edge of the rim. (See Fig 11.10)

3. Push the Vertical Shaft down and position the Mount/Demount Head into contact with the rim edge. (See Fig. 11.11)

4. Pull the locking handle towards you to lock the Vertical Shaft into position. As the slide is locked, the Mount/Demount Head will move upward approximately 1/8 inch and backward 1/8 inch from the rim edge. The Mount/Demount head roller should not be in contact with the rim edge. (See Fig 11.11 - 11.12)

---

**NOTE:**

CLAMP STEEL WHEELS FROM THE INSIDE (CLAMPS PUSH OUTWARD AGAINST WHEEL). CLAMP MAG AND CUSTOM WHEELS FROM THE OUTSIDE (CLAMPS PUSH INWARD AGAINST THE OUTSIDE RIM EDGE). REFER TO SECTION 12: CUSTOM AND SPECIAL WHEELS.

---

**WARNING**

THE RIM AND BEAD MUST BE LIBERALLY LUBRICATED. FAILURE TO USE AN ADEQUATE LUBRICANT CAN LEAD TO THE BEAD BINDING ON THE RIM AND DAMAGE TO THE MOTOR AND OR VOID THE WARRANTY.
5. Rotate the wheel using the Turntable Pedal until the valve stem is at the 3 o’clock position in relation to the Mount/Demount Head.

6. Insert the smooth curved end of the Bead Lifting Tool over the tab side of the Mount/Demount Head and below the top bead of the tire. (Fig 11.13)

7. Push the Bead Lifting Tool down and away from the wheel to lower the bead into the Drop Center while lifting up on the Table Top Pedal to rotate the turnable counter clockwise. (See Fig 11.14)

8. Insert the smooth curved end of Bead Lifting Tool over the right end knob of the mount/demount head and below the top bead of the tire. (See Fig 11.15)
9. Push the Bead Lifting Tool down toward the wheel to lift the tire bead up and over the tab of the demount head. Hold the Bead Lifting Tool in this position. (See Fig 11.16)

10. Depress the Table Top Foot Pedal to rotate the wheel clockwise. (See Fig 11.17)

11. Hold the Bead Lifting Tool down until the upper bead is solidly above the rim. Continue rotating the wheel clockwise until the upper bead is completely demounted. (See Fig 11.18 - 11.20)

12. Liberally lubricate the lower bead again, if there was any difficulty lubricating the lower bead earlier. (See Fig 11.21)

13. Lift and hold the tire so it is positioned with the lower bead in the drop-center portion of the wheel.

14. Insert the smooth curved end of the Bead Lifting Tool over the tab end of Mount / Demount Head and below the lower bead of the tire. Push the Bead Lifting Tool down toward the wheel to lift the tire bead up and over the left tab side knob portion of the Mount/ Demount Head. Hold the Bead Lifting Tool in this position. (See Fig 11.22 - 11.23)
15. Depress the Table Top Pedal to rotate the wheel.

16. The Mount / Demount Head will guide the bead up and over the edge of the wheel. Continue rotation until the lower bead is demounted. (See Fig 11.24 -11.26)

SECTION 12
CUSTOM AND SPECIAL WHEELS

ALLOY WHEELS
Some manufacturers offer wheels with little or no drop center. These are not DOT approved. The tire or wheel - or both - can be damaged and the tire could explode under pressure, resulting in serious injury or death. If you attempt to mount/demount this type of wheel, use extreme caution. (See Fig 12.1)

EUROPEAN PERFORMANCE WHEELS
(ASYMMETRICAL HUMP)
Some European wheels have very large humps except near the valve hole. On these wheels, the beads should be loosened at the valve hole on both the upper and lower sides first.

WHEELS WITH TIRE PRESSURE WARNING SENSORS
Most wheels today have a TPS incorporated into the valve stem. Some are strapped to the wheel opposite the valve hole. (See Fig 12.2)
DEMOUNTING TUBE TYPE TIRES

1. After both tire beads are loosened, try to remove the tube. If you can not remove the tube lubricate the beads and rim liberally.

2. Position the demount head and bead lifting tool as described earlier paying careful attention not to pinch the tube. Depress the table top pedal and rotate only a short distance at a time. This allows you to stop the process should you suspect the tube is getting pinched.

3. After upper bead is demounted, remove tube and demount lower bead.

REMEMBER:

TABLE TOP ROTATION CAN BE STOPPED AT ANY TIME BY REMOVING YOUR FOOT FROM THE ROTATION PEDAL. NORMAL TABLE TOP ROTATION FOR DEMOUNTING IS CLOCKWISE. DEPRESS THE TABLE TOP PEDAL TO ROTATE THIS DIRECTION. TO ROTATE THE TABLE TOP COUNTERCLOCKWISE, LIFT THE PEDAL UP WITH YOUR TOE.

SECTION 13 MOUNTING

1. Inspect the wheel closely for damage. Clean the wheel and remove any light corrosion or rubber residue. Do not attempt to service heavily corroded wheels. (See Fig 13.1)

2. Inspect tire for damage, paying close attention to the beads. Verify size match between tire and wheel. (See Fig 13.2)

3. Lubricate both tire beads liberally with tire manufacturer’s approved lubricant. (See Fig 13.3)

WARNING

THE RIM AND BEAD MUST BE LIBERALLY LUBRICATED. FAILURE TO USE AN ADEQUATE LUBRICANT CAN LEAD TO THE BEAD BINDING ON THE RIM AND LEAD TO DAMAGE TO THE MOTOR AND OR VOID THE WARRANTY.

WARNING

THE INFORMATION IN THIS SECTION MUST BE READ AND FOLLOWED CAREFULLY TO PREVENT ACCIDENTS AND INJURIES DURING MOUNTING.

WARNING

CHECK TIRE AND WHEEL CAREFULLY BEFORE MOUNTING. MAKE SURE THE TIRE BEAD DIAMETER AND WHEEL DIAMETER MATCH EXACTLY. CONSULT THE RUBBER MANUFACTURER’S ASSOCIATION FOR APPROVED RIM WIDTHS FOR TIRE SIZES.

DANGER

ATTEMPTS TO FORCE A BEAD SEAT ON MIS-MATCHED TIRES AND WHEELS CAN CAUSE THE TIRE TO VIOLENTLY EXPLODE, LEADING TO SERIOUS PERSONAL INJURY OR DEATH TO OPERATOR AND/OR BYSTanders.
4. Place tire over wheel and move Vertical Arm and Mount/Demount Head into position as described earlier. Position tire so that the lower bead is above the left side of the Mount/Demount Head and below the right front knob. (See Fig 13.4)

5. Manually push the tire down into the drop center of the wheel directly across from the Mount/Demount Head to reduce the tensional force on the bead. Depress the Table Top Pedal and rotate the wheel to begin mounting the lower bead. Rotate the Table Top until the lower bead is fully mounted. (See Fig 13.5 - 13.6)

6. For the top bead, rotate the Table Top until the valve stem is at the 3 o'clock position in relation to the Mount/Demount Head. Lift the upper bead above the right side of the Mount/Demount Head and below the knob. (See Fig 13.7)

7. With the Bead Lifting Tool, press down on the tire to hold the upper bead in the drop center. (See Fig. 13.8)

NEVER MOUNT A TIRE AND WHEEL HANDED TO YOU BY ANYONE WITHOUT CHECKING BOTH TIRE AND WHEEL FOR DAMAGE AND COMPATIBILITY. BE EXTRA CAUTIOUS OF PERSONS WITHOUT KNOWLEDGE OF TIRE SERVICE. KEEP BYSTANDERS OUT OF SERVICE AREA.

NEVER MOUNT A DAMAGED TIRE. NEVER MOUNT A TIRE ON A RUSTY OR DAMAGED WHEEL. DAMAGED TIRES AND/OR WHEELS MAY EXPLODE.

IF YOU DAMAGE THE TIRE BEAD DURING MOUNTING, STOP! REMOVE THE TIRE AND MARK IT AS DAMAGED. DO NOT MOUNT A DAMAGED TIRE.
8. Stand firmly in place and be prepared to hold the Bead Lifting Tool down as the tire/ Turntable rotates. Depress the Table Top Pedal and rotate the tire until the bead is mounted. (See Fig. 13.9 - 13.12)

9. Swing the Assist Tower into position and lower the Roller Arms so that they press down on the tire to hold the upper bead in the drop center. The Upper Arm must be locked and positioned next to the Mount-demount Head. (See Fig 13.13)

10. Depress the Table Top Pedal. As the Turntable rotates the Lower Arm will follow the tire around. Keep rotating the table until the bead is mounted. (See Fig 13.14 - 13.16)

NOTE:
LOW PROFILE TIRES MAY REQUIRE USE OF THE BEAD LIFTING TOOL.
SECTION 14
INFLATION

The Inflation Pedal located at the center of the left side of the machine serves two different functions. It checks air pressure in the tire and controls the flow of air through the Inflation Hose. (See Fig 14.1)

![Image](Fig 14.1)

**WARNING**

DO NOT FORCE THE TIRE ONTO THE RIM. BEAD DAMAGE COULD RESULT MAKING THE TIRE UNSAFE AND/OR CREATING THE RISK OF INJURY.

**DANGER**

CHECK INFLATION GAUGE FOR PROPER OPERATION. ACCURATE PRESSURE READINGS ARE IMPORTANT TO SAFE TIRE INFLATION. REFER TO THE OPERATING MAINTENANCE SECTION OF THIS MANUAL FOR INSTRUCTIONS. IF THE RIM HAS BEEN CLAMPED FROM THE OUTSIDE FOR TIRE MOUNTING, RELEASE THE CLAMPS ONCE BEAD SEAL IS OBTAINED, LIFT THE TIRE, AND MOVE THE CLAMPS TO THE CENTER OF THE TABLE TOP.

**DANGER**

THE CLIP-ON AIR CHUCK ON THE END OF THE INFLATION HOSE AND ALL INFLATION RELATED COMPONENTS SHOULD BE CHECKED WEEKLY FOR PROPER OPERATION. DO NOT USE THIS MACHINE FOR TIRE INFLATION IF ANY PARTS ARE DAMAGED OR APPEAR NOT IN PROPER WORKING ORDER.

**MOUNTING TUBE TYPE TIRES**

1. Lubricate the beads and rim liberally.
2. Position the Mount/Demount Head as described earlier. Mount the bottom bead first.
3. Apply rubber lubricant to the tube. Insert the tube into the tire paying careful attention not to pinch the tube. Round out the tube with a small amount of air.
4. Lower the Arm Rollers onto the tire as described earlier.
5. Round out the tube with a small amount of air. Apply rubber lubricant to the tube.
6. Depress the Table Top Pedal and rotate only a short distance at a time.
7. Mount the top bead.
The unit is equipped with a Pressure Limiter/Regulator to assist the operator with proper tire inflation. The Pressure Limiter will keep most car and light truck tires from inflating beyond 60 PSI. It is the operators responsibility to follow all instructions and to control inflation pressure as specified in these instructions. (See Fig 14.4)
STAGES OF INFLATION

Tire inflation is performed in four steps: Restraint, Bead Seal, Bead Seat, and Inflation. Read the explanation of each step and understand them thoroughly before proceeding and refer to them as necessary to verify that you are proceeding properly and safely.

CAUTION

HOLD THE RESTRAINT TOOL FIRMLY IN PLACE WHEN INSTALLING AND/OR REMOVING FROM THE LEFT HELPER ASSEMBLY. THE UNIT CAN DROP SUDDENLY TO THE FLOOR. BE SURE TO KEEP FEET CLEAR AT ALL TIMES.

2. Make sure the restraint tool is centered in the center hub of the wheel then press down on the left hand control valve. (See Fig 14.6).

STAGE ONE / WHEEL RESTRAINT

As an added safety precaution, a wheel restraint device has been added to protect operators during tire inflation.

1. Swing the Assist Tower to the side of the wheel and insert the restraint device as shown. (See Fig 14.5)

STAGE TWO / BEAD SEALING

1. Position valve stem in front of operator and connect the inflation hose after removing the valve core. (see Fig 14.7)
2. Step on the inflation pedal to allow air to flow into the tire and seal the beads. (see Fig 14.8)

28

BLAST TO SEAL THE BEAD

1. To Open the Slide Valve, PUSH the Slide Valve Forward.
2. To Close PULL the Slide Valve closed. (See Fig 14.10)

3. Position the Turbo-Blast Nozzle to direct air towards the Rim Center just under the Rim lip. (See Fig. 14.11)

4. Depress inflation pedal and open the Turbo-Blast Valve for less than one full second. The blast of air from the Turbo Blat Nozzle will expand tire and seal the beads.

5. Repeat these steps if beads have not sealed. It will be necessary to wait a few seconds for the air storage tank to recover before attempting again. If tire and wheel are properly lubricated and operator cannot achieve bead seal after a few attempts, check to see if the valve core has been be removed from the valve stem to allow more air flow into the tire to assist with bead seal. After bead seal is achieved, remove the chuck and reinstall the valve core.

STAGE THREE / BEAD SEATING

Bead seating usually occurs on the long tapered side of the wheel first and the shorter side last. Bead seating will usually require at least 7 PSI in the tire. 40 PSI is the maximum safe pressure at this stage regardless of tire operating pressure. Most European import cars and many aftermarket alloy wheels are very tight and can be difficult to bead seat. Also note that asymmetrical hump and run-flat tires are extremely difficult to bead seat. Follow tire manufacturer’s recommended procedure for bead seating.
1. Once tire pressure is indicated on the pressure gauge, continue to inject air into the tire in short intervals. Check the pressure frequently. Stand back during bead seat. Keep hands, arms, and entire body away from tire during this procedure. Tire beads should move outward and "pop" into their bead seat position as pressure inside the tire increases. If this does not happen, a problem exists. Investigate carefully. (see Fig 14.12)

2. Release air pressure from the tire by pressing the manual Pressure Relief Valve. (See Fig 14.13)

**WARNING**

OPERATOR SHOULD KEEP HANDS, ARMS, AND ENTIRE BODY AWAY FROM THE TIRE DURING THE FOLLOWING BEAD SEAT AND INFLATION PROCEDURES. DO NOT STAND OVER TIRE, AS PERSONAL INJURY COULD RESULT FROM INFLATING TIRE.

**DANGER**

STAND CLEAR WHILE INFLATING TIRE. TIRE OR WHEEL FAILURE UNDER PRESSURE MAY CAUSE SERIOUS INJURY OR DEATH.

**WARNING**

AVOID DISTRACTION DURING INFLATION. CHECK TIRE PRESSURE FREQUENTLY TO AVOID OVER INFLATION. EXCESSIVE PRESSURE CAN CAUSE TIRES TO EXPLODE, CAUSING SERIOUS INJURY OR DEATH TO OPERATOR OR BYSTANDER.

**WARNING**

CHECK TIRE PRESSURE FREQUENTLY. NEVER EXCEED 40 PSI WHILE SEATING BEADS. ONCE SEATED, NEVER EXCEED TIRE MANUFACTURER’S RECOMMENDED AIR PRESSURE. TIRES CAN EXPLODE, ESPECIALLY IF THEY ARE INFLATED BEYOND THEIR LIMITS. AT ALL PRESSURE LEVELS WHEN INFLATING THROUGH THE VALVE STEM, KEEP HANDS, ARMS, AND ENTIRE BODY AWAY FROM INFLATING TIRE. AN EXPLODING TIRE, WHEEL, OR BEAD SEALING EQUIPMENT MAY PROPEL UPWARD AND OUTWARD WITH SUFFICIENT FORCE TO CAUSE SERIOUS INJURY OR DEATH TO OPERATOR OR BYSTANDER.
Stage Four / Tire Inflation

1. Make sure both beads are seated. When both beads are seated, the tire is ready for inflation.

2. Replace the valve core if it was removed.

3. Depress the Inflation Pedal to inflate the tire. Do not stand over the tire during inflation.

4. Do not inflate the tire above the manufacturer’s recommended pressure as stamped on the tire sidewall. The typical inflation pressure for automobile tires is between 24 and 45 PSI. Light truck inflation pressure typically covers a wider range. Release air pressure from the tire by pressing the manual Pressure Relief Valve.

NOTE:
When inflating tires that require more than 60 PSI, always use a safety cage and air hose with a clip-on air chuck and in-line valve. The hose must have enough length between the chuck and the operation/in-line valve to allow the technician to stand outside the trajectory.

BEFORE MAKING ANY INSPECTION, ADJUSTMENT, OR REPAIR, DISCONNECT THE POWER SOURCE AND OR AIR SUPPLY AND BLOCK OUT ALL MOVING PARTS TO PREVENT INJURY.

KEEP THE MACHINE AND THE IMMEDIATE WORK AREA CLEAN. DO NOT USE COMPRESSED AIR TO REMOVE DIRT AND DEBRIS FROM THE MACHINE. FOREIGN MATERIAL MAY BE PROPELLED INTO THE AIR AND INTO OPERATOR OR BYSTANDER CAUSING PERSONAL INJURY.

WEAR PROTECTIVE CLOTHING AND USE EYE PROTECTION WHEN MAKING ANY ADJUSTMENTS OR REPAIRS TO THE MACHINE.

WARNING
NEVER ATTEMPT TO MOUNT AND INFLATE MISMATCHED TIRES AND WHEELS. MISMATCHED TIRE AND WHEEL COMBINATIONS CAN EXPLODE, CAUSING PERSONAL INJURY OR DEATH TO OPERATOR AND BYSTANDERS. FOR SAFETY, DO NOT ATTEMPT TO MOUNT AND INFLATE MISMATCHED TIRES AND WHEELS.

DANGER
IF OPERATOR IS UNABLE TO OBTAIN BEAD SEAT, SOMETHING IS WRONG. DEFATE TIRE COMPLETELY, INSPECT TIRE AND WHEEL, CORRECT ANY PROBLEMS FOUND, RE-LUBRICATE BOTH TIRE BEADS, AND REATTEMPT BEAD SEAL AND SEAT PROCEDURES. FOLLOW ALL SAFETY INSTRUCTIONS IN THIS MANUAL AND ON MACHINE.

CHECK TIRE PRESSURE FREQUENTLY. NEVER EXCEED 40 PSI WHILE SEATING BEADS. ONCE SEATED, NEVER EXCEED TIRE MANUFACTURER’S RECOMMENDED AIR PRESSURE. TIRES CAN EXPLODE, ESPECIALLY IF THEY ARE INFLATED BEYOND THEIR LIMITS. AT ALL PRESSURE LEVELS WHEN INFLATING THROUGH THE VALVE STEM, KEEP HANDS, ARMS, AND ENTIRE BODY AWAY FROM INFLATING TIRE. AN EXPLODING TIRE, WHEEL, OR BEAD SEALING EQUIPMENT MAY PROPEL UPWARD AND OUTWARD WITH SUFFICIENT FORCE TO CAUSE SERIOUS INJURY OR DEATH TO OPERATOR OR BYSTANDER.

NOTE:
WHEN INFLATING TIRES THAT REQUIRE MORE THAN 60 PSI, ALWAYS USE A SAFETY CAGE AND AIR HOSE WITH A CLIP-ON AIR CHUCK AND IN-LINE VALVE. THE HOSE MUST HAVE ENOUGH LENGTH BETWEEN THE CHUCK AND THE OPERATION/IN-LINE VALVE TO ALLOW THE TECHNICIAN TO STAND OUTSIDE THE TRAJECTORY.

BEFORE MAKING ANY INSPECTION, ADJUSTMENT, OR REPAIR, DISCONNECT THE POWER SOURCE AND OR AIR SUPPLY AND BLOCK OUT ALL MOVING PARTS TO PREVENT INJURY.

KEEP THE MACHINE AND THE IMMEDIATE WORK AREA CLEAN. DO NOT USE COMPRESSED AIR TO REMOVE DIRT AND DEBRIS FROM THE MACHINE. FOREIGN MATERIAL MAY BE PROPELLED INTO THE AIR AND INTO OPERATOR OR BYSTANDER CAUSING PERSONAL INJURY.

WEAR PROTECTIVE CLOTHING AND USE EYE PROTECTION WHEN MAKING ANY ADJUSTMENTS OR REPAIRS TO THE MACHINE.
SECTION 15
MAINTENANCE INSTRUCTIONS

Read and follow all the maintenance instructions provided in this manual to keep the machine in good operating condition. Regular inspections and proper maintenance are essential to preventing accidents and injuries. These instructions will help you service the unit. Instructions are for a person with some mechanical ability and training. No attempt has been made to describe all basic steps such as how to loosen or tighten fasteners. Basic procedures such as cycling systems and checking operation of the equipment are not fully described since they have been described previously in this manual. Do not attempt to perform work beyond your ability or at which you have no experience. If you need assistance, call an authorized service center or contact the factory.

DAILY

♦ Check the tire pressure gauge function, and check the accuracy monthly. Use a pressurized tire and a high quality pressure gauge. If the gauge is defective, replace it immediately.

♦ Make sure all fasteners are securely tightened and all guards and covers are in place.

♦ Check for worn, damaged or missing parts including grips and protective covers. Replace them before allowing the unit to be used.

♦ Check oil level and remove water from the separator.

♦ Inspect the unit and check to be certain that all systems are operating normally. Follow detailed inspection and testing procedures as specified for various components at regular intervals.

MONTHLY

♦ Pivot Points, assist tower vertical shaft should be cleaned with a vaporizing solvent and then lubricated with chassis grease. (See Fig 15.1)

♦ Check adjustment of the mount/demount head.

♦ Check the condition and adjustment of the turntable drive belt.

♦ Check function of the Inflation Pedal pressure limiter/regulator. The pressure regulator should never be adjusted to exceed 60 PSI.

♦ Clean the table top, clamps, steel mount/demount head, and other working surfaces with a vaporizing solvent.

♦ Replace any damaged or missing safety decals, available from the factory.

Mount/Demount Tool Head Adjustment

To adjust tool head clearance, adjust locking nut up or down until lift clearance is 1/8” to 3/16”. Recheck clearance. (See Fig 15.2)

Mount/Demount Head Cleaning

Clean dirt and debris from the mount/demount tool roller with small screw driver or pick. Lubricate with light penetrating oil. (See Fig. 15.3)
AIR DRIER/OILER MAINTENANCE

AIR/WATER MAINTENANCE

Check oil and water levels regularly, and perform these maintenance items daily:

1. Observe through the clear sight glass the oil and water levels. (See Fig 15.4)

2. If any amount of water is observed, drain by pushing up on the drain plug at the bottom of the reservoir. (See Fig 15.5)

OILER MAINTENANCE

1. Disconnect air supply from machine. (See Fig 15.6)

2. Reservoir Cup may be removed for cleaning by turning the reservoir counter-clockwise and pulling down. Add oil to the lubricator if the fluid level is below the middle of the gauge. Unscrew the Oil Reservoir Cup, add SAE 10W non-detergent oil or an air tool oil if necessary. (See Fig 15.7)

3. Replace the Cup and reconnect the air supply when service/adjustments are complete.

Failure to maintain the water separator/air oil in proper condition may void warranty. Drain water out of the system regularly and keep the oil reservoir filled.

NOTE:
THIS ADJUSTMENT WILL REQUIRE TWO PERSONS TO PERFORM.

4. With the air source connected, depress the Bead Breaker Pedal to operate the Bead Breaker. Observe the sight glass and adjust the oil flow of the oiler by turning the Oiler Adjustment Screw counter-clockwise so that 2-3 drops of oil drip through the sight glass for each operation of the Bead Breaker Pedal. (See Fig 15.8)
Inflation Pedal Pressure Limiter

Maintenance

**WARNING**

**THE INFLATION PRESSURE LIMITER IS PRESET AT THE FACTORY AND SHOULD NEED NO ADJUSTMENT. MODIFY ONLY IF PRESSURE EXCEEDS 60 PSI. OPERATING A TIRE CHANGER WITH A DEFECTIVE, IMPROPERLY ADJUSTED, OR BYPASSED PRESSURE LIMITER COULD RESULT IN A TIRE EXPLOSION WITH SEVERE INJURY OR DEATH TO OPERATOR OR BYSTANDERS. ALWAYS BE SURE THAT THE PRESSURE LIMITER IS OPERATING PROPERLY ON THE MACHINE AT ALL TIMES. PRESSURE LIMITER IS SET AT 60 PSI. ANY REQUIRED INFLATION ABOVE 60 PSI SHOULD BE PERFORMED IN AN INFLATION CHAMBER/SAFETY CAGE.**

The Inflation Pedal pressure limiter helps prevent inflation of standard size or larger tires or tubes beyond 60 PSI to minimize risk of explosion. This device is for the safety of the operator and bystanders. Proper operation of the pressure limiter is essential to safe operation of the machine. (See Fig 15.9)

Check operation of the pressure limiter as follows at least once a month:

1. Remove tires and/or wheels from the machine.

2. Connect the Inflation Hose to an empty service tank with a pressure gauge (the gauge should read 0). Use a certified tank with at least 250 PSI pressure rating. (See Fig 15.10)

3. Depress Inflation Pedal to start air flow through the hose and into the tank. Maintain a steady pressure for constant flow.

4. Watch the rising pressure on the tank gauge and the gauge on the machine. As tank pressure reaches 60 PSI, the pressure limiter should stop the air flow automatically. Both gauges should read 60 PSI ± 5 PSI.

5. If the pressure exceeds 60 PSI, adjust the knob on the regulator by lifting the locking cover and turning COUNTERCLOCKWISE. After adjustment is made, secure cover in the locked position. (See Fig 15.11)

6. Repeat steps 1-6. Readjust if necessary.

7. After pressure limit has been set, check the manual release valve function by pressing the button and releasing pressure from the tank until it reaches 50 PSI. Release air inside tank and disconnect Inflation Hose. (See Fig 15.12)
TURNTABLE DRIVE BELT INSPECTION / ADJUSTMENT

DANGER

THE MOTOR ON THIS MACHINE CONTAINS HIGH VOLTAGE. DISCONNECT POWER AT THE RECEPTACLE BEFORE PERFORMING ANY ELECTRICAL REPAIRS. SECURE PLUG SO THAT IT CANNOT BE ACCIDENTALLY PLUGGED IN DURING SERVICE.

1. Remove the Side Panel. (See Fig 15.13)

2. Inspect the Drive Belt for cracking and wear and replace as necessary. (See Fig 15.14)

3. Loosen the four Motor mounting bolts and nuts. (See Fig 15.15)

4. Adjust the Belt deflection to 3/8” - 1/2”. (See Fig 15.16)

INFLATION VALVE LUBRICATION

1. Disconnect Air Supply from the machine. (See Fig 15.17)

2. Disconnect the Air Line going to the left port on the Inflation/Bead Blast Pedal. Place 1/2 oz. of SAE 10W non-detergent oil or an air tool oil into the open port. (See Fig 15.18).
TRANSMISSION INSPECTION / LUBRICATION

1. Rotate the Turntable so that the Transmission fill plug is visible and remove plug. (See Fig. 15.20)

2. Put a flexible wire into the Transmission Oil Fill Hole until the wire hits the bottom of the well. (See Fig. 15.21)

3. Remove the wire and check the capacity level of the Transmission fluid. The oil should cover no more than 1” (25 mm) of the wire.

**CAUTION**

FILLING OIL LEVEL HIGHER WILL RESULT IN LEAKAGE OF THE TRANSMISSION SEALS.

**NOTE:**

Gearbox Requires 90 Plus Viscosity Gear Oil

**CAUTION**

BE SURE TO READ ALL WARNING LABELS AND INSTRUCTION MANUAL PRIOR TO OPERATION OF THIS MACHINE. FAILURE TO COMPLY WITH PROPER SAFETY INSTRUCTIONS MAY LEAD TO SERIOUS HARM OR EVEN DEATH OF OPERATOR AND/OR BYSTANDERS.

**CAUTION**

ALWAYS INSPECT TIRES BEFORE MOUNTING. DEFECTIVE OR DAMAGED TIRES MAY BURST OR EXPLODE WHEN INFLATING AND MAY LEAD TO SERIOUS HARM OR INJURY.

4. Press the Inflation Pedal six times to work the oil into the Valve. (See Fig. 15.19)
**CAUTION**

KEEP HANDS CLEAR OF BEAD AREA WHEN INFLATING.

**WARNING**

BE SURE TO READ ALL WARNING LABELS AND INSTRUCTION MANUAL PRIOR TO OPERATION OF THIS MACHINE

**CAUTION**

ALWAYS WEAR SAFETY GLASSES WHEN OPERATING THIS MACHINE.

**WARNING**

KEEP HANDS CLEAR OF ALL PINCH POINTS

**DANGER**

STAND CLEAR WHILE INFLATING TIRE. TIRE OR WHEEL FAILURE UNDER PRESSURE MAY CAUSE SERIOUS INJURY OR DEATH.

**WARNING**

DO NOT WEAR LOOSE CLOTHING, LONG HAIR OR JEWELRY. MOVING PARTS CAN SNAG AND PULL

**CAUTION**

- Be sure to READ ALL WARNING LABELS and instruction manual prior to operation of this machine. Failure to comply with proper safety instructions may lead to serious harm or even death of operator and/or bystanders.
- Improper operation of this machine may cause damage to machine or cause personal harm or injury.
- ALWAYS wear safety goggles when operating this machine.
- KEEP HANDS CLEAR of all pinch points.
- Check machine for damaged parts prior to operation. DO NOT USE MACHINE if any component is broken or damaged.
- NEVER EXCEED the factory recommended air pressure of tire. Over inflating the tire beyond the manufacturer's recommendation can cause tire burst or explosion.
- Operators should inspect all tires and rims for possible defects prior to mounting.
- ALWAYS INSPECT TIRES BEFORE MOUNTING. Defective or damaged tires may burst or explode when inflating and may lead to serious harm or injury.
- ALWAYS MAKE SURE TIRE SIZE MATCHES RIM SIZE prior to mounting. Mounting tires on defective or improper rims can cause tire burst or explosion and may lead to serious harm or injury.
- This machine is not intended to be a restraining devise for exploding tires, tubes, or rims. All operators should take proper precaution to implement safety and to avoid personal injury or harm.
- DO NOT lean over the tire while inflating. KEEP HANDS AND BODY CLEAR at all times and as far back as possible during inflation. An exploding tire, rim, or component thereof can cause injury or death to operator and/or bystanders. REMAIN CLEAR AT ALL TIMES.
- To inflate tires, use short bursts while carefully monitoring the pressure, tire, rim, and bead.
- While seating beads NEVER EXCEED 40 p.s.i. If bead does not seat at 40 p.s.i., immediately relieve pressure and check for mismatch of tire, damaged bead and/or other cause.
- ALWAYS USE good quality tire lubricant when servicing tires.

Always Think Safety!
