Designed to Meet a Variety of Everyday Duties

The RFJ-3TP is a versatile lifting machine designed to meet a variety of everyday duties. Capable of handling a full 6,000-lb. load, this trusty floor jack is made out of heavy-gauge steel to ensure maximum durability under tremendous pressure. As with every Ranger [floor jack](#), the RFJ-3TP exceeds all ANSI standards in performance and safety.

Lowering this jack is as easy as twisting the handle, thus activating a small gear that controls a pressure valve; as pressure is released, the floor jack gently lowers with no effort from the user. With overload protection and a fully sealed hydraulic system to prevent contamination, the lift mechanism requires virtually zero maintenance over its lifetime.

This jack is designed to handle most residential vehicles, including light trucks and SUVs. With a 5.25" in collapsed profile, this isn't one of our super-low-profile models, but it is ideal for average sedan heights and heavier-duty vehicle types. It's also exceptional lightweight, so you get an incredible power-to-weight ratio that surely explains why this floor jack is a staple in garages worldwide.

Features

- Alloy-plated ram
- Welded lift arm assembly
- Heavy gauge steel construction
- Swivel casters for easy mobility
- Professional model designed for heavy use
- Heavy steel construction for maximum durability
- Sealed hydraulics prevents contamination
- Built-in safety overload system

Specifications

Lifting Capacity	6,000 lbs. (2,722 kg)
Lowered Height	5.25" (133 mm)
Raised Height	19.25" (489 mm)
Front Width	10.75" (273 mm)
Rear Width	13.5" (343 mm)
Chassis Length	26" (660 mm)
Shipping Weight	84 lbs. (38 kg)
Shipping Dimensions	30" x 15" x 9" (762 mm x 381 mm x 229 mm)
