Drip-Proof, Weatherproof & Foolproof Design

If you have a BendPak HD-7 or HD-9 series [four-post lift](#), this optional, two-piece, full-length aluminum deck attaches easily between the runways, providing you with a platform for additional storage. The Aluminum Deck closes the center of your four-post lift which turns your four-post lift into a lifting platform that has a variety of applications.

The Aluminum Deck simultaneously increases your garage or shop's square footage, and can be used for storing motorcycles, ATVs and other garage clutter. It also prevents potentially harmful fluids from dripping below the lift platform, so you can safely and confidently store precious cars and equipment underneath.

All Aluminum Deck Models
