Lightweight Aluminum Ramps are Preferred Among Professionals

Aluminum Approach Ramps are a great, lightweight accessory for lifting low-profile cars on a [four-post lift](#). These extended Aluminum Ramps give your super-low-profile car the room it needs to glide smoothly onto the lift without risk of damage, and their super lightweight construction makes them easy to move around.

Made of aluminum, these 16-lb. ramps are significantly lighter than the Steel Ramps version, allowing you to maneuver them into place with ease. With 48" of length, Aluminum Ramps are significantly longer than standard four-post lift approach ramps, and feature an attractive diamond plate finish that provides a non-slip surface. With an 18" width and heavy-duty construction, the Aluminum Ramps can support some of the biggest wheels and vehicles in the business.
