

Bluetooth Operation

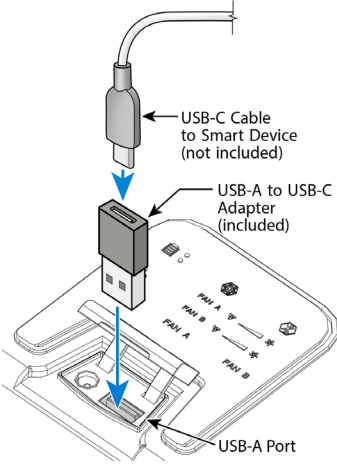

The Tour-LX includes a Bluetooth 5.0 receiver that will stream audio from any Bluetooth enabled smart device. The insulated Bluetooth speaker enclosures are water resistant and tuned to provide quality sound at any volume level.

- 1. Turn on the Tour-LX by pressing and holding  on the control panel for 2-3 seconds.
- 2. Press  for 2-3 seconds.
- 3. The Tour-LX will then audibly announce, “Bluetooth Mode.”
- 4. Go to the Bluetooth settings on your smart device and select “Coolee Tour-LX.”
- 5. The Tour-LX will announce, “Bluetooth connected.”
- 6. Select media and play.
- 7. Control the volume via the connected smart device.
- 8. To disconnect the Bluetooth, press and hold  for 2-3 seconds.
- 9. To turn off the Tour-LX, press and hold  for 2-3 seconds.

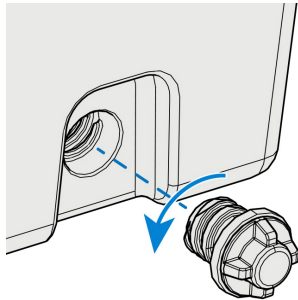

USB-A to USB-C Adapter

The Tour-LX comes with a convenient USB-A to USB-C adapter, for connecting and charging various smart devices. If your device requires a USB-C connection, insert the Adapter into the USB-A Port and then connect the USB-C cable into the open end of the Adapter.

Draining the Tour-LX

- 1. Place the cooler on a level surface where the water can be drained.
- 2. Unscrew the Drain Plug.
- 3. Allow the melted ice and water to drain. For faster drainage, slightly tilt the cooler toward the drain side.
- 4. Once empty, re-seal the plug to prevent leaks.

Storage

When not in use, Cool Boss recommends storing the Tour-LX indoors and away from harsh elements. Before storing, remove all personal items and clean the cooler. Remove the Battery Packs and fully recharge them before storing, keeping them separate from the Tour-LX and placed where they are safely away from children and extreme temperatures. The Tour-LX should be stored in temperatures between 34°F and 100°F (1°C to + 38° C). Extended storage inside a vehicle is not recommended.

Product assistance is available from the dealer, by calling Cool Boss at (855) 223-2665 (follow the prompts), or by emailing support@coolboss.com. For parts replacement contact Cool Boss (have the model number “Tour-LX” available).

TOUR-LX
QUICK START GUIDE

4-in-1 Air Cooler, Ice Chest, Bluetooth® Speaker and Portable Power Bank

The Coolee Tour-LX is a multi-purpose, 4-in-1 portable cooler designed to keep you and your refreshments cool on the golf course or wherever your adventures may take you, while also providing access to music through any Bluetooth enabled smart device and the Tour-LX’s Bluetooth speakers.

The Coolee’s temperature management system offers two air cooling options; ambient that uses the chilled air inside the cooler for instant relief, or recirculating water cooling that utilizes a micro-size water pump paired with a heatsink radiator for maximum cooling performance. A shielded impeller pump delivers boosted efficiency at low noise levels.

Read this Quick Start Guide carefully before using the Tour-LX.

Do not set up or operate the Tour-LX until all users have also downloaded and read the entire User Guide and are familiar with all operating instructions and warnings. The full User Guide for the Tour-LX is available online at coolboss.com/coolee-tour-lx-manual/ or by scanning the QR code.

Make a visual inspection of the product before using it. Check for damaged or missing parts. Do not use the product if problems with the unit are found. Instead, stop using it and contact the dealer, call Cool Boss at (855) 223-2665 (follow the prompts), or email Cool Boss at support@coolboss.com.

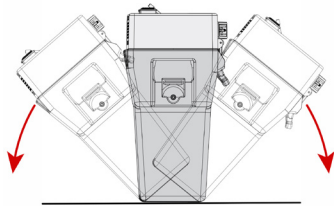

WARNING California Proposition 65: This product can expose users to chemicals including styrene and vinyl chloride which are on a list of over 900 chemicals identified by the State of California to cause birth defects or reproductive harm. ALWAYS use this product in accordance with Coolee instructions. For more information go to www.P65Warnings.ca.gov.

WARNING Lithium-ion Batteries are hazardous. Only dispose of at a hazardous waste collection facility.

DANGER Lithium-ion batteries are very sensitive and may explode, burn, or cause a fire if misused. When disposed of improperly, lithium-ion batteries may short, causing them to become hot, burst, or ignite. Do not short, disassemble, drill into, deform, or heat batteries. Do not throw batteries into a fire. Frozen batteries should be allowed to fully thaw at room temperature and then evaluated for swelling or cracking. Never attempt to charge a battery that is swollen or has cracks in the plastic case.

CAUTION The Tour-LX is top heavy (creating a tipping hazard), as all the critical cooling components are located within the lid. Great care should be taken when handling the unit to avoid accidental injury or product damage.

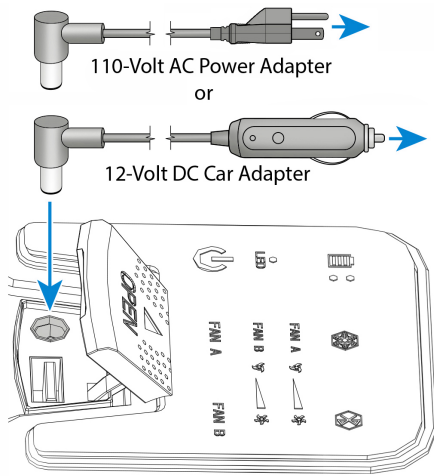

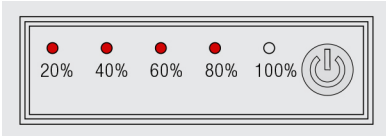

Charging the Battery Packs

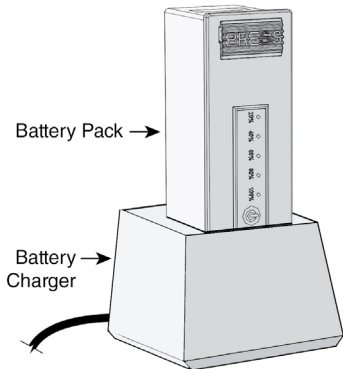

The Tour-LX includes two rechargeable 10,000 mAh lithium-ion Battery Packs. The Battery Packs may be recharged via the freestanding Battery Charger or while installed in the Tour-LX—using one of two (included) Power Cords (one connects to a 12-Volt DC vehicle charging outlet and the other to a standard 110-Volt AC outlet).

CAUTION The Battery Packs must ALWAYS remain in the Tour-LX while the unit is connected to a power source.

Note: The battery level indicator on each Battery Pack displays in 20, 40, 60, 80, and 100-percent increments. Press and hold  to show the current battery charge level.

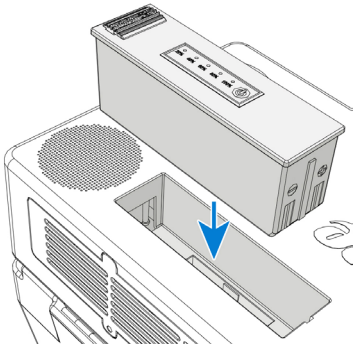

Using the Battery Charger

- 1. Insert the Battery Pack into the Battery Charger, with the contacts facing down and aligned with the contacts within the Charger.
- 2. Power the docking station with either the 110V AC Power Adapter or the 12V DC Power Cord.
- 3. Connect either the 110V AC Power Adapter or the 12V DC Power Cord to the Battery Charger's 12V DC Port.
- 4. Plug the opposite end of the 110V AC power adapter into a properly grounded wall outlet, or the 12V DC power cord into a 12V DC vehicle charging socket.
- 5. Charging begins automatically.
- 6. Disconnect from power and remove the Battery Pack once a 100 percent charge is achieved, indicated by the LED lights on the Battery Pack.

Charging inside the Tour-LX

- 1. Insert both Battery Packs into the Tour-LX, ensuring that the contacts on the Battery Packs match the contacts within the Battery Ports.
- 2. Raise the Port Cover on the Tour-LX Touch Control Panel to access the 12V DC Power Cord Port.
- 3. The Batteries may be charged with either the 110V AC Power Adapter or the 12V DC Car Adapter.
- 4. Connect the 110V AC power adapter or the 12V DC Car Adapter to the Tour-LX's 12V DC Power Port.
- 5. Plug the opposite end of the 110V AC Power Adapter into a properly grounded wall outlet, or use the 12V DC Car Adapter to connect to a 12V vehicle charging socket.
- 6. Charging begins automatically.
- 7. Remove the Battery Packs once charging is complete, and power has been disconnected, if the Tour-LX is not going to be used immediately.

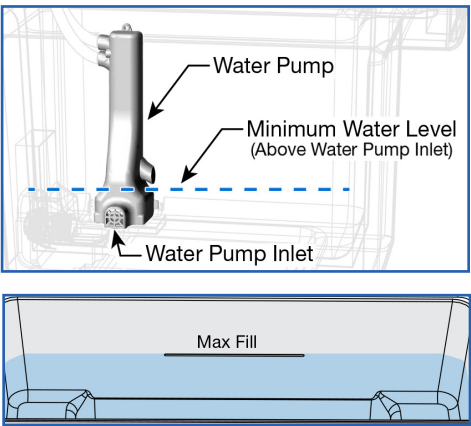

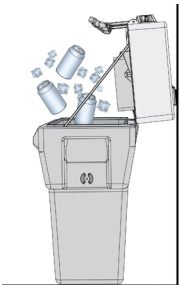

Using the Tour-LX

CAUTION The Water Pump Inlet MUST be covered with water during use. Water lubricates, feeds, and cools the pump. Running the pump dry will damage it. Cool Boss recommends keeping the water level at least 1 in. (25 mm) above the Water Pump Inlet (inside the cooler) at all times.

CAUTION Keep the Tour-LX upright at all times during use, while it is filled with ice and water, to avoid water seeping into the Battery Packs or electrical components.

CAUTION Do not fill the cooler above the Max Fill line (on the inside), as shown to the right.

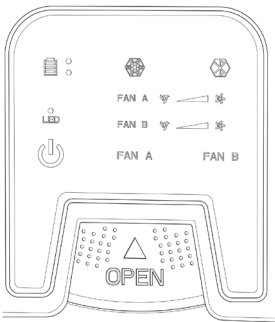

CAUTION Cool Boss recommends placing the Tour-LX, with the lid open as shown, against a wall while filling the cooler with ice, water and beverages. The Tour-LX is top heavy, and this will aid in preventing it from accidentally tipping over.

CAUTION The lid of the Tour-LX is heavy; use caution and keep hands and fingers clear when opening and closing.

Operating the Tour-LX Cooling System

- There are two cooling options designed into the Tour-LX:
- 1. **Full A/C.** When using the Cooling Pump, in addition to the Fans, the Tour-LX will provide maximum cooling benefits.
 - 2. **Fans only.** By using the Fan controls only (no Cooling Pump), the Tour-LX will provide a cool, refreshing breeze.

Cooling with the Cooling Pump

- 1. Install both fully charged Battery Packs by aligning the contacts on each Battery Pack with the contacts in the Battery Ports on the Tour-LX.
- 2. Press and hold  for 2-3 seconds to turn on the Tour-LX.
- 3. To engage the Cooling Pump, press  for 2-3 seconds.
- 4. To operate **Fan A** and adjust the fan speed, press **Fan A** once for low and twice for high. The fan level will display on the control panel. To turn off the fan, press and hold **Fan A** again.
- 5. To operate **Fan B** and adjust the fan speed, press **Fan B** once for low and twice for high. The fan level will display on the control panel. To turn off the fan, press and hold **Fan B** again.
- 6. To turn off the Power, press and hold  for 2-3 seconds.

Cooling with the Fans Only

- 1. Install both fully charged Battery Packs by aligning the contacts on each Battery Pack with the contacts in the Battery Ports on the Tour-LX.
- 2. Press and hold  for 2-3 seconds to apply power to the Tour-LX.
- 3. To operate **Fan A** and adjust the fan speed, press **Fan A** once for low and twice for high. The fan level will display on the control panel. To turn off the fan, press and hold **Fan A** again.
- 4. To operate **Fan B** and adjust the fan speed, press **Fan B** once for low and twice for high. The fan level will display on the control panel. To turn off the fan, press and hold **Fan B** again.
- Note:** Selecting a low fan speed will allow for longer run times.

Keeping Drinks Cold

Cool Boss recommends filling the Tour-LX with up to 12 (12-ounce) cold beverage cans. Once added, simply fill the inner compartment with ice cubes, or reusable cooling packs (not included) and cold water, making sure to add enough water to cover the Water Pump Inlet. See illustration at the top of the page.

- Note:** For best results, use pre-chilled drinks, or refrigerate overnight before putting them into the cooler.
- Note:** Before filling the Tour-LX, ensure that the Water Drain Plug is securely closed, but not overtightened, as this could damage the gasket or threads.
