Offset Adapters for Fast, Easy Lift Arm Adjustments

Making minor adjustments to your lift pads is a snap with BendPak's Offset Adapters. These adapters are designed to increase the range of motion of your contact pad by 200% to give you the extra motion you may need to get your car in the air. Offset Adapters are not compatible for every lift. With their 35 mm pin, Offset Adapters only fit our GP-7 series or any [two-post lift](#) that accepts 35 mm adapters, and can only be combined with a similar 35 mm lift pad adapter.

Features

- Provides a mid-step adapter height that is 1.5" lower than the current 3" adapter
- Increases the pad range of motion by 200%
- Offset design allows you to make final OEM lift point positioning without the need for constant arm tube adjustment
- Can be used in conjunction with BendPak's 3" or 6" adapters
