

CUTTING TIPS

10-Piece Positive-Rake Carbide Cutting
Tips with 2 Screws

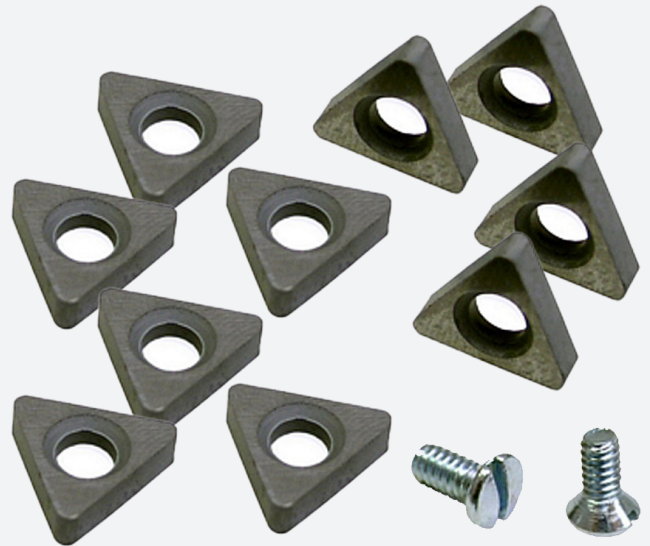

SKU# 5150099

3-SIDED
CUTTING TIPS

WHEEL SERVICE ACCESSORY

BEST IN THE BRAKE LATHE BUSINESS

Engineered for maximum performance and extended service life, Ranger's genuine 3-sided carbide cutting tips deliver clean, precise rotor and drum finishes with every pass. Each insert features three usable cutting edges, allowing technicians to simply rotate the tip when an edge wears, dramatically extending tool life while reducing operating costs.

Manufactured from premium-grade carbide, these cutting tips maintain a sharper edge longer than many generic alternatives, helping minimize chatter, improve surface finish quality, and produce more consistent machining results. Designed specifically for Ranger brake lathes, they ensure proper fit, reliable performance, and optimal cutting geometry for professional brake service.

Every Ranger brake lathe includes a cutting adapter package with genuine Ranger carbide inserts. For maximum performance, accuracy, and durability, always replace worn inserts with authentic Ranger cutting tips rather than lower-quality aftermarket alternatives.

FEATURES

10 per pack

2-screw tips for use on rake tool holder

Each insert features 3 cutting edges

Used for resurfacing cast iron drums and rotors

Shipping Weight - 1lb

Shipping Dimensions - 9" x 6" x 1"
