Low-Profile Steel Ramps

With 48" of length, BendPak's optional Steel Ramps are significantly longer than standard [four-post lift](#) approach ramps, so super-low-profile cars can more easily glide onto the runways without risk of damage to your vehicle. These Steel Ramps also feature a textured surface for a better tire grip, and its 18" width and heavy-duty construction can support some of the biggest wheels and vehicles in the business.

At BendPak, we understand that your cars and projects are important to you. That's why we made these Steel Ramps to reduce any risk of damage you may have when lifting your vehicle on a four-post lift. With their extended length and low rise, this optional Steel Ramp accessory is ideal for lifting any low-profile cars on a four-post lift. This accessory set comes with two low-profile ramps, quick-mount brackets and all the necessary hardware to set up your ramp. With the Steel Ramps' simple but effective design, installation, or removal, is both easy and intuitive. These ramps ensure that your low-profile car has the room it needs to be lifted safely and easily.
