for easy mobility

High-Strength Aluminum – Built to Last

The Ranger 4000ALX is an aluminum racing jack powerhouse. Despite not featuring a steel construction, this jack can safely handle up to 4,000-lbs. The 4000ALX takes minimal effort to pump and will get your vehicle to the maximum height in no time. Simple to use and just as safe. The 4000ALX features a built-in safety overload valve to prevent hydraulic overload, ensuring your vehicle won't suddenly collapse while lifting.

Featuring a sleek, compact design, the 4000ALX has been built from the ground up with operators in mind. Ranger understands that for a lot of people out there, track day is one of the most important days of the week. Because of this, the 4000ALX is easy to operate and easy to transport over potentially long distances.

Features

- Alloy-plated ram
- Aircraft-Grade Billet Alum. Design
- Roller-cam plunger assembly
- Swivel casters for easy mobility
- Built-in safety overload system
